HBA Zürich

Precision Medicine in Oncology - Optimizing Cancer Care in the 21st Century

On 21 March, Roche Pharma Switzerland in cooperation with HBA Zürich will host a panel discussion on an innovative program called precision medicine in oncology at the University Hospital Zürich (USZ).

Experts will share their vision on molecular profiling and how precision medicine, an example of a synergistic collaboration between USZ and Roche Pharma, will shape cancer treatment in future and change the lives of cancer patients.

Join us for this exciting event to gain insights into how this academic-industry collaboration started, how it works and how it may also offer learnings for other disease areas where personalized patient care is becoming a reality.
