

Guest professor at the Chair of Sustainable Construction, D-BAUG, ETH;
Associate Professor at Beijing Jiaotong University, China

Research & Practice in High-Performance Low-Carbon Buildings

Prof. Dr. Junjie Li

This lecture will focus on her 14-year research and practice in High-performance Low-carbon Buildings. She believes that architecture should constantly balance the relationship between technology and the environment, rather than blindly pursuing technological advancement as the ultimate goal. A good architectural design should reflect a response to the environment and resources by making the most of them, while also paying attention to the specific needs of the users.
