PUBLIC LECTURE

Clean Insulating Technologies offers insulation solutions made from natural silage grass boards. Their flagship products, branded as Gramitherm®, are natural, healthy, and environmentally friendly. They are committed to making homes and buildings more energy-efficient, comfortable, and healthy. They aim to market durable, energy-saving products that significantly reduce greenhouse gas emissions. They are working closely with local agricultural partners, promoting short-circuit distribution, and putting people and communities at the heart of their mission.

Christian Roggeman will share his vision to create a global concept rooted in local collaboration, revolutionizing the way we think about sustainable insulation.
