

529-0230-00 Anorganische und Organische Chemie I

Responsible people:

- Prof. Jeffrey Bode, HCI F315, bode@org.chem.ethz.ch
- Anne Schuhmacher, HCI F306, anne.schuhmacher@org.chem.ethz.ch

Schutzkonzept: OACP I Praktikum

Protection during Praktikum

Facemasks

- Students and assistants wear masks at all times during Praktikum
- Only masks distributed through the assistants (or higher quality masks upon agreement) are allowed
- New masks are worn every day
- Masks are thrown away every evening after Praktikum (bins are provided)

Disinfection/washing hands

- Use of shared equipment (IR spectrometer, melting point, chemical storage): disinfection of hands every time before use, queuing system outside of the lab to reach the shared space
- Return to own workspace/lab (after use of shared equipment, HCI-Shop, waste disposal, break, etc): handwashing or disinfection obligatory
- Disinfection of equipment every evening: rotavaps, sink, IR spectrometer, melting point apparatus

Contact tracing

- Students have to keep assigned lab space, i.e. no switching with colleagues
- Sign up sheet if visit to other lab, e.g. for IR spectrometer
- Recording of absences

Teaching if students or assistants in quarantine

COVID-19 case among students or teaching assistants

- Information: report positive test result to Prof. Bode/Anne Schuhmacher
- Whole lab (approx. 20 students + 2 TAs) quarantined for 10 days
- Experiment schedule with buffer: quarantined lab performs shorter replacement experiment
- At home: students write and correct reports

Quarantine for teaching assistants

- Approx. 5 qualified replacement teaching assistants available
- Two teaching assistants in the same lab from different groups: easier replacement

Quarantine for individual students

- Accepted: quarantine because of contact tracing
Not accepted: quarantine due to travel to countries with high risk of infection
- Case-by-case decision: compensation with shorter replacement experiment, omission of one experiment still allows to teach the course goals
