

# MACS – Practical Course

Each group will receive a set of four samples that they will characterize using the relevant experimental techniques. A presentation and report will summarize the findings of the practical course.

The **goal** of the project is to develop familiarity with sample preparation and data interpretation for experimental techniques applied to a specific type of catalytic material.

Practical courses will be held at ETH & PSI (~ two trips to PSI needed)

~ 6 practical sessions

**Groups should consist of 3-4 people. Choose your group members and contact:**
