

TABLE INDEX

| | | |
|-----|--|-----|
| I | Symbols, acronyms and notations (most important or/and frequently encountered only) used in this book. | xvi |
| 1.1 | Standard properties of water relevant in the context of ionic solvation. | 5 |
| 2.1 | Estimates for the air-liquid interfacial potential and temperature derivative for non-aqueous solvents. | 26 |
| 3.1 | Parameters and properties of a few non-polarizable water models commonly used in atomistic simulations. | 83 |
| 3.2 | Overview of the available sets of ion-solvent (water) Lennard-Jones interaction parameters for the alkali and halide ions. | 87 |
| 3.3 | Available Lennard-Jones interaction parameter sets for the alkali cations. | 88 |
| 3.4 | Available Lennard-Jones interaction parameter sets for the halide anions. | 96 |
| 3.5 | Average electric potentials calculated by atomistic simulations for the SPC water model. | 115 |
| 4.1 | Interconversion formulae between the standard and the density-corrected standard-state variants. | 174 |
| 4.2 | Standard thermodynamic parameters of the gas-phase electron and proton. | 195 |
| 4.3 | Correction terms for (partial) molar variables corresponding to alternative standard-state conventions. | 210 |
| 5.1 | Standard molar thermodynamic parameters of the alkali and halide elements as well as hydrogen. | 327 |
| 5.2 | Standard structural and molar thermodynamic parameters of the alkali-halide salts. | 330 |
| 5.3 | Equilibrium distances of the alkali-halide gas-phase ion-pair complexes. | 331 |

| | |
|---|-----|
| 5.4 Available sets of effective ionic radii for the alkali and halide ions. | 340 |
| 5.5 Standard relative electrode (redox) potentials and temperature derivatives for the alkali and halide element-ion couples as well as the hydrogen-proton couple in water. | 347 |
| 5.6 Standard thermodynamic parameters of salt formation and corresponding molar entropies for the alkali-halide salts. | 352 |
| 5.7 Standard thermodynamic parameters of dissolved salt formation and corresponding partial molar variables for the alkali-halide salts in water. | 358 |
| 5.8 Standard thermodynamic parameters of dissolution for the alkali-halide salts in water. | 363 |
| 5.9 Standard thermodynamic parameters of gas-phase atom or ion formation and corresponding molar parameters for the alkali and halide atoms or ions, as well as the hydrogen atom and the proton. | 367 |
| 5.10 Standard thermodynamic parameters of reticulation for the alkali-halide gas-phase ion pairs. | 374 |
| 5.11 Standard thermodynamic parameters of solvation for the alkali-halide gas-phase ion pairs in water. | 381 |
| 5.12 Standard partial molar variables for the dissolved alkali-halide salts in water. | 385 |
| 5.13 Spectroscopic and standard work functions for the alkali (and some other) metals. | 396 |
| 5.14 Real absolute potential of the reference hydrogen electrode in water. | 405 |
| 5.15 Standard real single-ion solvation parameters for alkali and halide gas-phase ions as well as the proton in water. | 410 |
| 5.16 Standard conventional single-ion solvation parameters for the alkali and halide gas-phase ions in water. | 416 |
| 5.17 Standard conventional single-ion partial molar variables for the alkali and halide ions dissolved in water. | 420 |
| 5.18 Estimates for the standard air-liquid interfacial potential and its temperature derivative for water. | 438 |
| 5.19 Available estimates for the intrinsic solvation parameters of the proton in water. | 462 |
| 5.20 Estimates for the standard intrinsic partial molar variables of the aqueous proton. | 465 |
| 5.21 Recommended data for the reticulation parameters and salt partial molar variables of the alkali-halides. | 472 |
| 5.22 Recommended data for the standard thermodynamic parameters of alkali, halides and hydrogen. | 473 |
| 5.23 Recommended data for the real hydration parameters of the proton and the real partial molar variables of the aqueous proton. . | 474 |

| | |
|-------------|-----|
| Table index | 643 |
|-------------|-----|

| | |
|--|-----|
| 5.24 Recommended data for the intrinsic hydration parameters of the proton and the intrinsic partial molar variables of the aqueous proton. | 475 |
| 5.25 Recommended data for standard redox potentials and their first and second pressure and temperature derivatives for the alkali and halide half-cell elements considering water as a solvent. | 476 |
| 5.26 Recommended data for the single-ion intrinsic hydration parameters of the gas-phase proton and alkali and halide ions, and the single-ion intrinsic partial molar variables of the aqueous proton and alkali and halide ions. | 478 |
| 6.1 Continuum-electrostatics estimates for the hydration free energies of the alkali and halide ions, along with suggested correction terms for various neglected effects. | 495 |
| 6.2 Fitting coefficients for the empirical evaluation of specific correction terms to raw single-ion solvation free energies calculated by atomistic simulations. | 504 |
| 6.3 Standard intrinsic hydration free energy of the sodium cation evaluated by atomistic simulations with application of correction terms. | 515 |
| 6.4 Conventional and intrinsic hydration free energies of the alkali and halide ions calculated from atomistic simulations based on different ion-water Lennard-Jones interaction parameter sets or derived from experiment. | 520 |
| 6.5 Effective dipole moment of water molecules in the first hydration shell of ions, estimated based on quantum-mechanical computations. | 527 |
