

CONTENTS

Table of symbols	xvi
1 Introduction	1
2 Fundamental experimental problems	8
2.1 Electroneutrality	8
2.2 Surface polarization	18
2.3 Fundamental experimental problems: summary	34
3 Fundamental theoretical problems	39
3.1 Types of theoretical models	40
3.2 Continuum-electrostatics calculations	45
3.3 Classical atomistic simulations	61
3.3.1 Basic methodology	62
3.3.2 Parameters	80
3.3.3 Calculation of ionic solvation free energies	102
3.3.4 Calculation of intrinsic bulk electric potentials	117
3.3.5 Calculation of air-liquid interfacial potentials	120
3.3.6 Fundamental problems	126
3.4 Quantum-mechanical computations	134
3.5 Fundamental theoretical problems: summary	138
4 Concepts and definitions	143
4.1 Notations	143
4.2 Thermodynamics	144
4.2.1 Thermodynamic variables	145
4.2.2 Molar and partial molar variables	156
4.2.3 Ideal behaviors	160
4.2.4 Standard states (this book)	163
4.2.5 Solute standard-state variants	171
4.2.6 Activity	177
4.2.7 Reaction parameters	180
4.2.8 Phase-transition reactions	185
4.2.9 Heat-up reactions	187

4.2.10	Formation reactions	188
4.2.11	Temperature-scaled heat capacity integration (TCI) . .	190
4.2.12	Spectroscopy-based statistical mechanics (SBS)	190
4.2.13	Gas-phase electron and proton parameters	194
4.2.14	Thermodynamic reactions relevant to ionic solvation .	196
4.2.15	Thermodynamic cycles relevant to ionic solvation . . .	199
4.2.16	Standard-state corrections to the solvation process . .	202
4.2.17	Standard states (alternative conventions)	205
4.2.18	Determination of thermodynamic parameters	211
4.3	Interfacial effects	214
4.3.1	Free and bound interfacial charge distributions	215
4.3.2	Galvani, Volta and surface potentials	233
4.3.3	Characteristic situations	250
4.3.4	Chemical potentials	256
4.3.5	Standard and spectroscopic work functions	261
4.3.6	Absolute electrode potentials	263
4.3.7	Connection to single-ion solvation properties	269
4.3.8	External <i>versus</i> internal potentials	275
4.4	Electrochemistry	289
4.4.1	Notations	289
4.4.2	Potential difference measurement	290
4.4.3	Galvanic cell measurements	293
4.4.4	Voltaic cell measurements	301
4.4.5	Electrocapillary and related measurements	307
4.5	Single-ion properties	310
4.5.1	Conventional values	311
4.5.2	Real values	317
4.5.3	Intrinsic values	318
4.5.4	Conversion formulae	320
5	Experimental determination	325
5.1	Molar thermodynamic parameters of the elements . . .	326
5.2	Structural and molar thermodynamic parameters of the salts .	328
5.3	Gas-phase equilibrium ion-pair distances	331
5.4	Effective ionic radii	332
5.5	Relative electrode (redox) potentials	346
5.6	Thermodynamic parameters of salt formation	350
5.7	Thermodynamic parameters of dissolved salt formation . .	353
5.8	Thermodynamic parameters of salt dissolution	361
5.9	Thermodynamic parameters of atomization	364
5.10	Thermodynamic parameters of ionization	366
5.11	Thermodynamic parameters of reticulation	373
5.12	Thermodynamic parameters of salt solvation	378
5.13	Metal work functions	395
5.14	Real absolute potential of the hydrogen electrode . . .	398

5.15	Real single-ion solvation parameters	407
5.16	Conventional single-ion solvation parameters	412
5.17	Air-liquid interfacial potential of the pure solvent	424
5.18	Intrinsic proton solvation parameters	440
5.19	Recommended data	470
5.20	Suggested intrinsic single-ion solvation parameters	476
5.21	The solvated electron	484
6	Theoretical determination	487
6.1	Continuum-electrostatics calculations	488
6.1.1	Correction terms	488
6.1.2	Semi-atomistic approaches	496
6.2	Classical atomistic simulations	497
6.2.1	Correction terms	498
6.2.2	Consistent calibration of ion-solvent interactions	517
6.2.3	The atomistic-consistency assumption	522
6.2.4	Improved force-field description	525
6.3	Quantum-mechanical computations	532
6.3.1	Quasi-chemical theory	532
6.3.2	Hybrid quantum-classical simulations	534
6.3.3	Car-Parrinello molecular dynamics simulations	536
6.3.4	Calculation of the air-liquid interfacial potential	539
6.3.5	Calculation of deprotonation and redox parameters	540
7	Conclusion	544
	References	557
	Table index	641
	Figure index	644
	Keyword index	647
