Labelling scheme

The coding of variable labels follows a uniform scheme. The first two digits denote the wave. For example, for all variables gathered in the first wave, every variable starts with the two identical digits w1_*, accordingly with w3_* for the third wave.

The subsequent digits indicate the number of the question, equivalent to its position in the questionnaire. For example, w2_q3 denotes Question 3 of Wave 1. Similar labelling applies to metadata variables. For example, w1_lang refers to the language of the Wave 1 questionnaire.

The last few digits determine the position of an item or answer option in case of an item battery or multiple-answer question. For example, questions might allow multiple answers, which are then coded as binary variables for the respective answer choice. Likewise, many matrix questions comprise several items. The numbering follows the published questionnaire, however the item arrangement is usually randomized for respondents.

Answers to Open-ended questions (e.g. when choosing the answer options ‘other’) are stored in a separate variable. Those end with the suffix “_txt”.

Question types

The given question types explain the way respondents were allowed to answer a specific question. This is, either selecting a single or multiple response options from a given list, inserting text or numeric values in open text boxes, or showing one’s opinion via rating on a predefined continuum. Metadata record basic information on individual survey rounds and respondents.

Mobility Pricing

The following section contains a conjoint experiment focused around different options of mobility pricing.

First, all participants were randomly split into 3 different treatment groups and one control group. Each group was introduced to the concept of mobility pricing in a different way, as displayed in the questions below.

The control group did also receive an introduction to mobility pricing with no specific focus and no subsequent question. The introduction for the control group reads as follows:

(EN)

Mobility pricing is the concept where private transportation users (e.g. drivers) are charged fees when driving on roads/motorways (tolls) or driving into city centres (entrance fees). Mobility pricing is generally intended to reduce traffic and congestion, reducing the total number of cars on roads and motorways and spreading out travel across non-peak travel times.

Recently, the Federal Council has proposed initial steps towards mobility pricing within Switzerland. New mobility pricing schemes in Switzerland could take on different forms. Depending on how the government designs such mobility pricing, this could make a big difference to you and to Switzerland as a whole. Policy-makers thus want to know what form of mobility pricing you would support or oppose.

(DE)

Mobility-Pricing ist ein Konzept, bei dem private Verkehrsteilnehmende eine Gebühr bezahlen müssen, wenn sie auf Strassen/Autobahnen (Maut) oder in Stadtzentren (Eintrittsgebühr) fahren. Mobility-Pricing bezweckt grundsätzlich, Verkehrsstau zu reduzieren, die Anzahl Fahrzeuge auf Strassen und Autobahnen zu senken sowie Reisen gleichmässiger auf Nichtspitzenzeiten zu verteilen.

Kürzlich hat der Bundesrat erste Schritte vorgeschlagen, um Mobility-Pricing in der Schweiz eines Tages anzuwenden. Mobility-Pricing könnte verschiedene Formen in der Schweiz annehmen. Je nachdem wie die Regierung Mobility-Pricing gestaltet, könnte das einen grossen Unterschied für Sie und die Schweiz als Ganzes machen. Politiker und Politikerinnen wollen deshalb wissen, welche Art von Mobility-Pricing Sie unterstützen würden und welche Sie nicht unterstützen würden.

Each participant was presented with 5 sets of two competing attribute compositions called proposal A and proposal B (= 10 total sets of attribute combinations). After every set the following three questions were asked:

1)

(EN)

Suppose you had to decide between the two proposals in a referendum today. Would you rather support Proposal A or Proposal B?

(DE)

Angenommen, Sie müssten heute zwischen den zwei Vorschlägen in einer Volksabstimmung entscheiden. Würden Sie eher Vorschlag A oder Vorschlag B unterstützen?

The response options were as follows:

[1] Proposal A

[2] Proposal B

2)

How much would you favor or oppose Proposal A?

(DE)

Inwieweit sind Sie für oder gegen Vorschlag A?

3)

With the following response options:

[1] Strongly favor

[2] Somewhat favor

[3] Neutral
