Science Stories WFSC Short Films Premiere

25 May 2021, 17:00–18:00 CET

Online event

Register: <https://app.eu.veertly.com/v/research-film-premiere>

The Program

The WFSC Research Programs support new cross-disciplinary and solution-oriented research to address food system challenges. We are excited to show results from several of these projects in the form of short films:

- Watch the premiere of several of our short films to learn more about different food systems research projects at ETH Zurich,
- Learn about the craft of visual storytelling from videographer [Marius Born](#),
- Gain insight about using different platforms to share science from [Prof. Emma Wetter Slack](#),
- And meet the stars! Talk with the young researchers who stepped in front of the camera to bring their science stories to life.

The Venue

We will greet you as well as Marius Born and Emma Wetter Slack on the Veertly platform. Simply register and click to the platform using your web browser for the event. Networking with the stars will take place on Wonder, a fun, social online environment. Braida Thom, WFSC Short Films Producer, will moderate the event.

The Films

Teaming up with soil microbes

Starring: Lukas Wille, Molecular Plant Breeding Group

Fighting Vitamin A deficiency and soil depletion

Starring: Rafaela Feola Conz, Sustainable Agroecosystems Group

Red clover for sustainable livestock production

Starring: Mike Ruckle, Molecular Plant Breeding Group

Rooibos - Looking beneath the surface

Starring: Josep Ramoneda Massagué, Plant Nutrition Group

Growing food without land

Starring: Iris Haberkorn and Alexander Mathys, Sustainable Food Processing Group

Bringing buckwheat back into our fields and kitchens

Starring: Eduardo Pérez and Michelle Nay, Crop Science and Molecular Plant Breeding Groups

Rethinking human waste

Starring: Ben Wilde, Sustainable Agroecosystems Group
