# Requirements Tools

Your friendly assistant

(<name>@inf.ethz.ch)

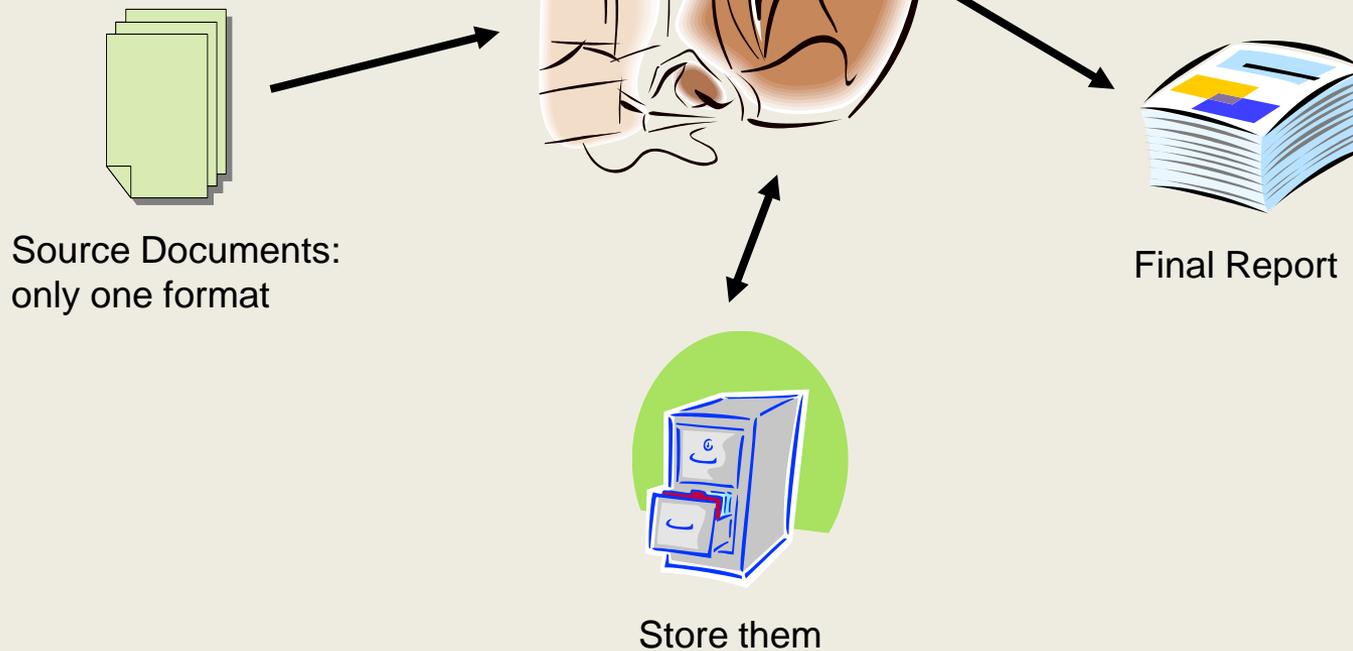

Chair of Programming Methodology

# Agenda for today

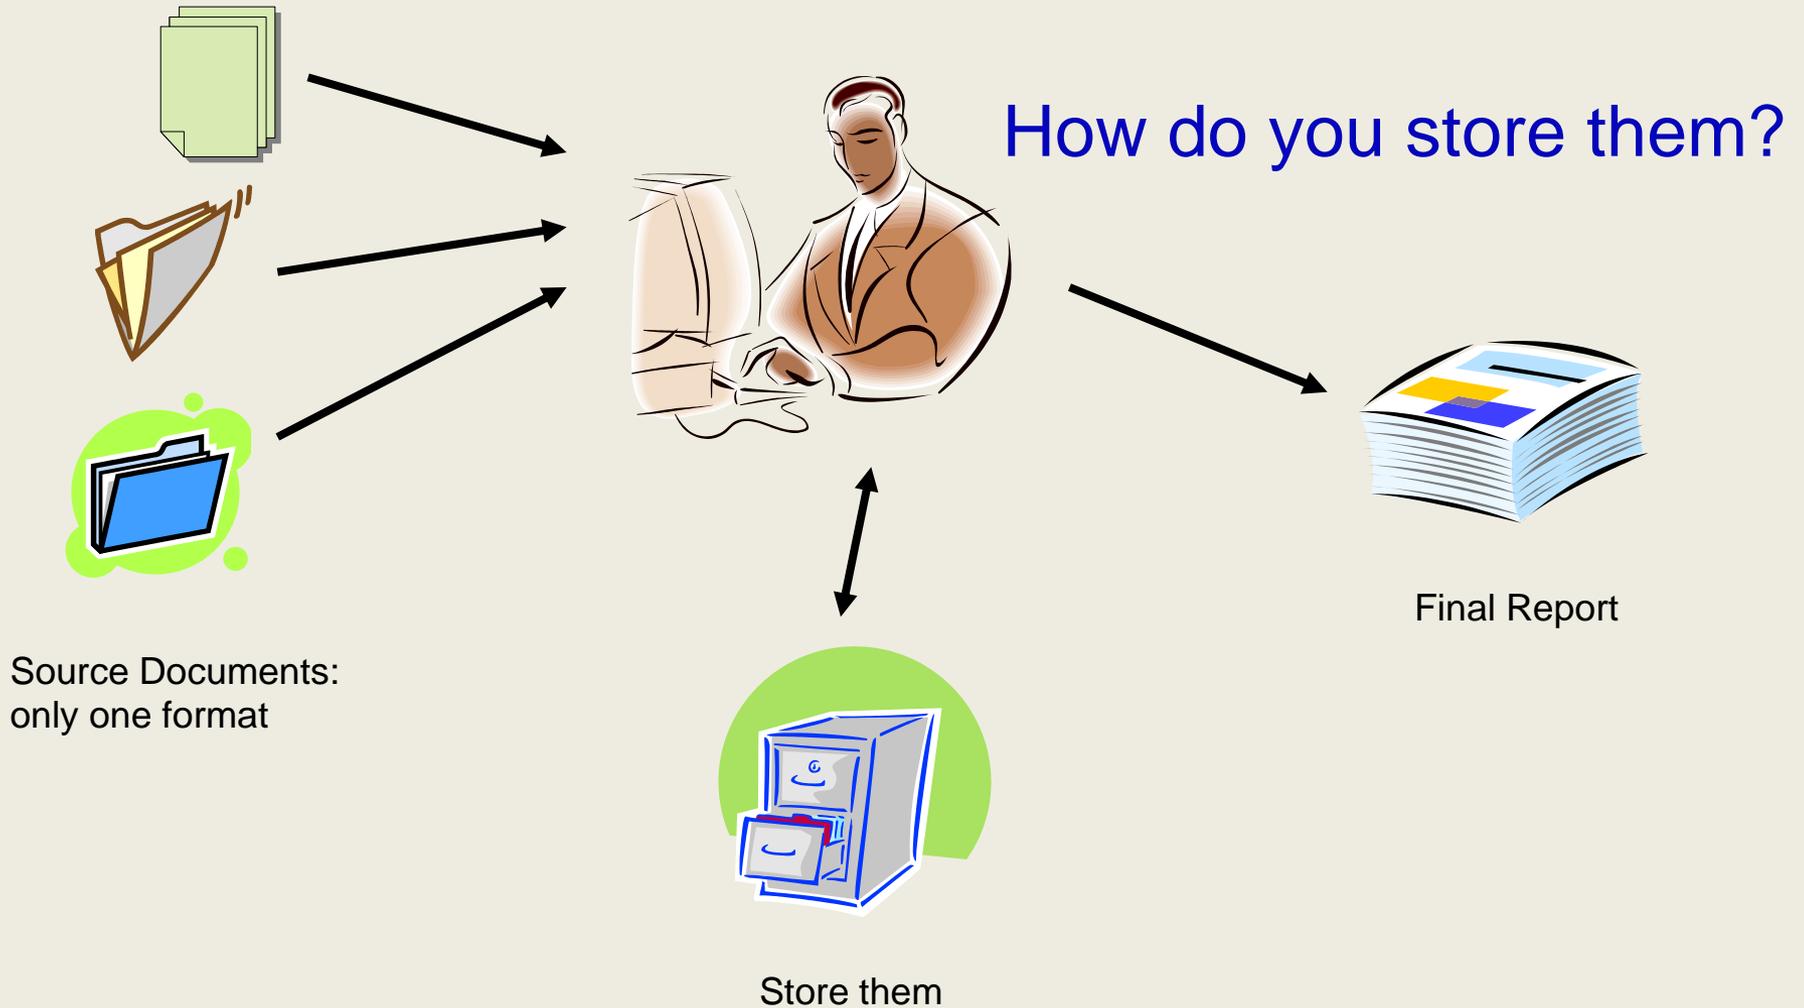

1. Problem
2. Tasks of Requirements Management tool
3. Tool Presentation: **Rational RequisitePro**
4. Discussion

# Problem

1. Capture the requirements
2. Store them
3. Write a report

# Problem (cont.)

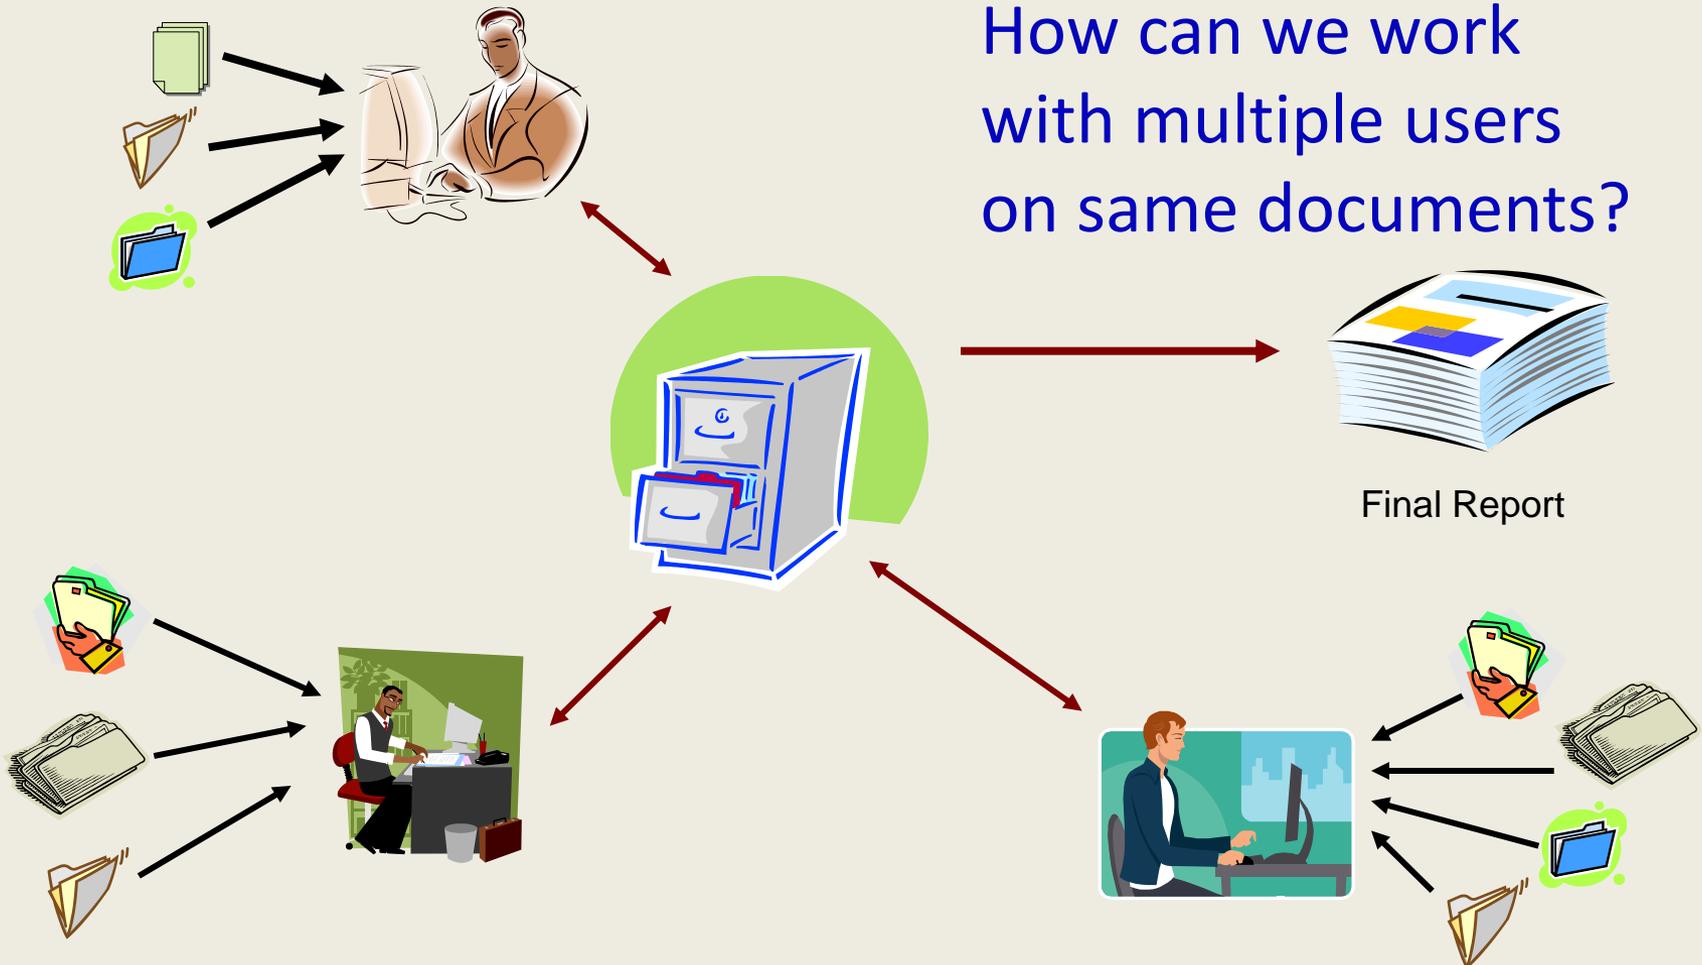

Source Documents:  
only one format

Final Report

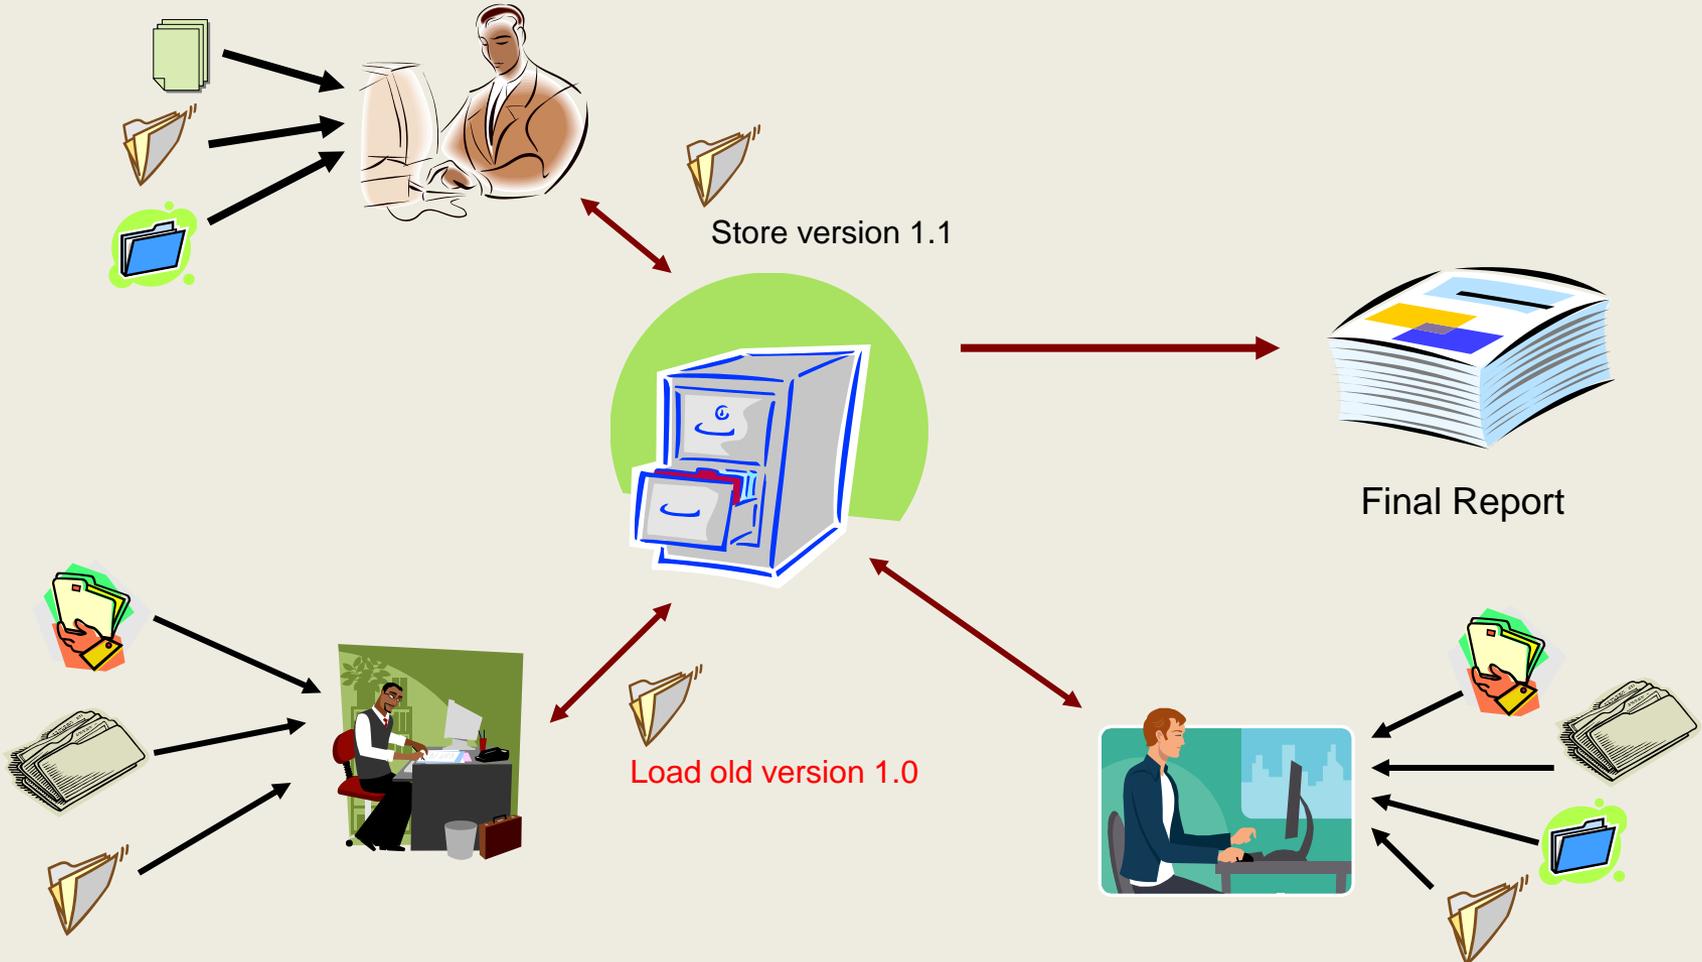

Store them

# Problem (cont.)

How can we work with multiple users on same documents?

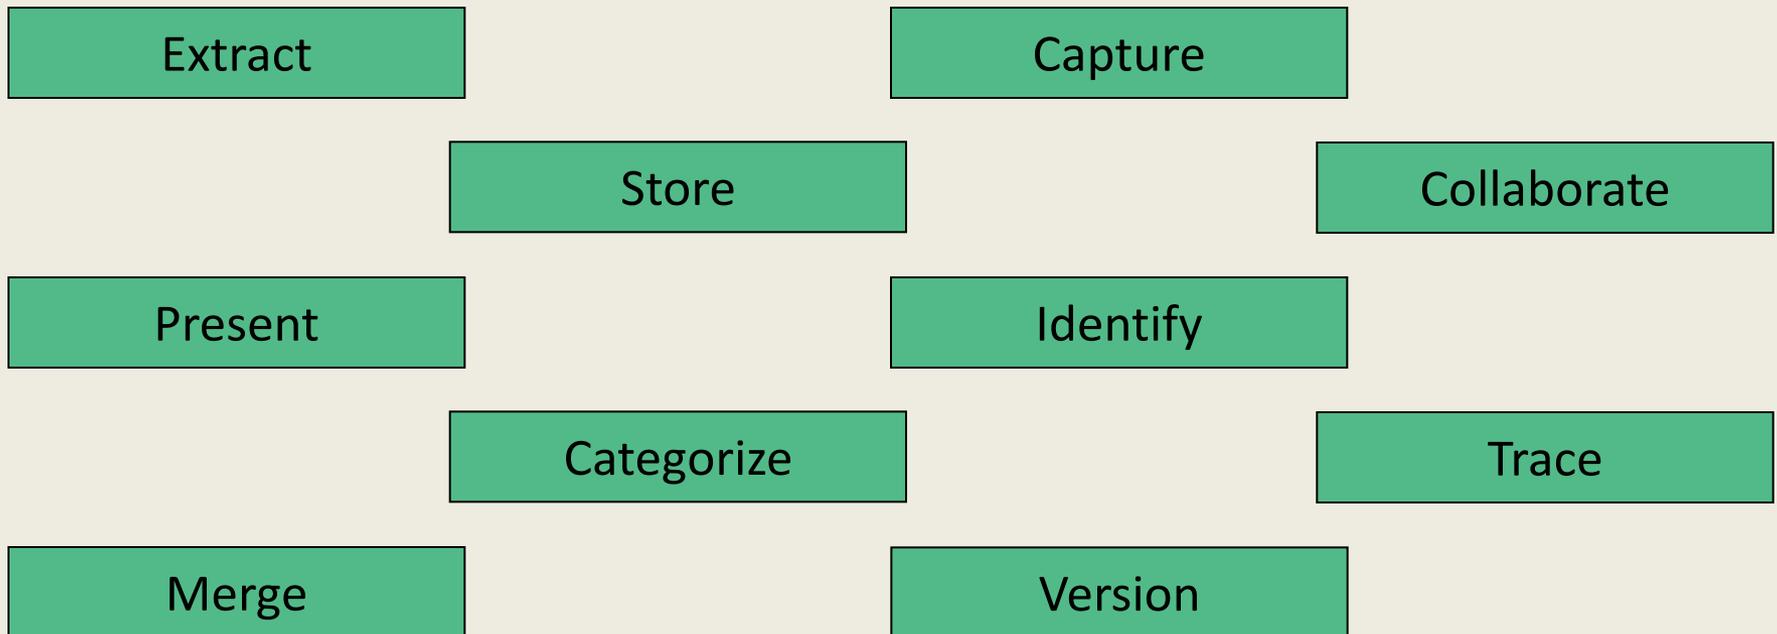

# Problem (cont.)

# Tools for software requirement

- We need tools.
- Task of Requirement Tools:

# Extract

- **Sources** for requirements come in different forms
  - Word Documents
  - PDF Documents
  - Diagrams
  - E-Mails
  - Photos, Video, Audio, ...
- Requirements have to be **extracted** from these documents
- Any extracted requirement has to be **linked** to its source
- Sometimes it is difficult to “link into the source”.

# Capture

- Are requirements always **plain text** ?
  - “A picture can say more than a thousand words.”
  - Technical applications are often specified with mathematical equations.

# Store

- More or less a **database** issue.
- For large and long-term projects, the database with requirements can become **very large**.
- We need fast retrieval of data.

# Collaborate

- If there are many people working on the same requirement data:
  - How can they all **access** the data ?
  - How is tracked “**Who changes what ?**”
  - **Collision** detection

# Present

- The final requirements document has to
  - form the contractual basis between client and supplier.
  - be well **sorted**.
  - **readable**.
  - **understandable**.
- The tools should be able to **automatically generate** a current version of the requirements document at any time.

# Other tasks

- Version
  - Documents are constantly changed.
  - The tool must keep the version of the documents
- Identify
  - Every requirement needs an **identification**
  - This identification has to be **unique** and **stable** over time and space

# Other tasks (cont.)

- Categorize
  - Categorization is the basic approach to organize data.
  - Standard techniques:
    - hierarchical structure
    - tags (labels)
    - numbering
- Trace
  - During the requirements process we identify:
    - Requirements that complement other requirements
    - Requirements that contradict other requirements
    - Requirements that are derived from other requirements

# Other tasks of RMT (cont.)

- Merge
  - Many sources for requirements
    - At least one for every stakeholder
  - A **single document** should be produced.
  - A tool can support this process:
    - Showing **differences** between documents.
    - Identifying **similarities** between documents.

# Tools

- There are a lot of requirement tools:

Accept 360° Active Focus Agility AnalystPro Caliber CARE Cradle CRW  
DocuBurst Doors Focal Point GMARC iRise IRqA Jalsoft Leap SE MKS  
MockupScreens Objectiver Open Process Framework Rally RDT Reconcile  
Reqtify RequireIT RequisitePro Rhapsody Serena RTM Slate SpeedEV  
Statestep Steeltrace Team-Trace Truereq Vital-Link WIBNI XTie

- List of requirement tools and links to web pages:

<http://easyweb.easynet.co.uk/~iany/other/vendors.htm>

# Rational RequisitePro

- Developed by IBM
- Enables the creation, analysis and management of requirements and use cases
- Incorporates a database infrastructure
- Provides detailed traceability views
- Integrates with other tools (in the IBM Software Development Platform)

# Exploring the tool

File Edit View Requirement Traceability Tools Window Help

Main menus and tools bar

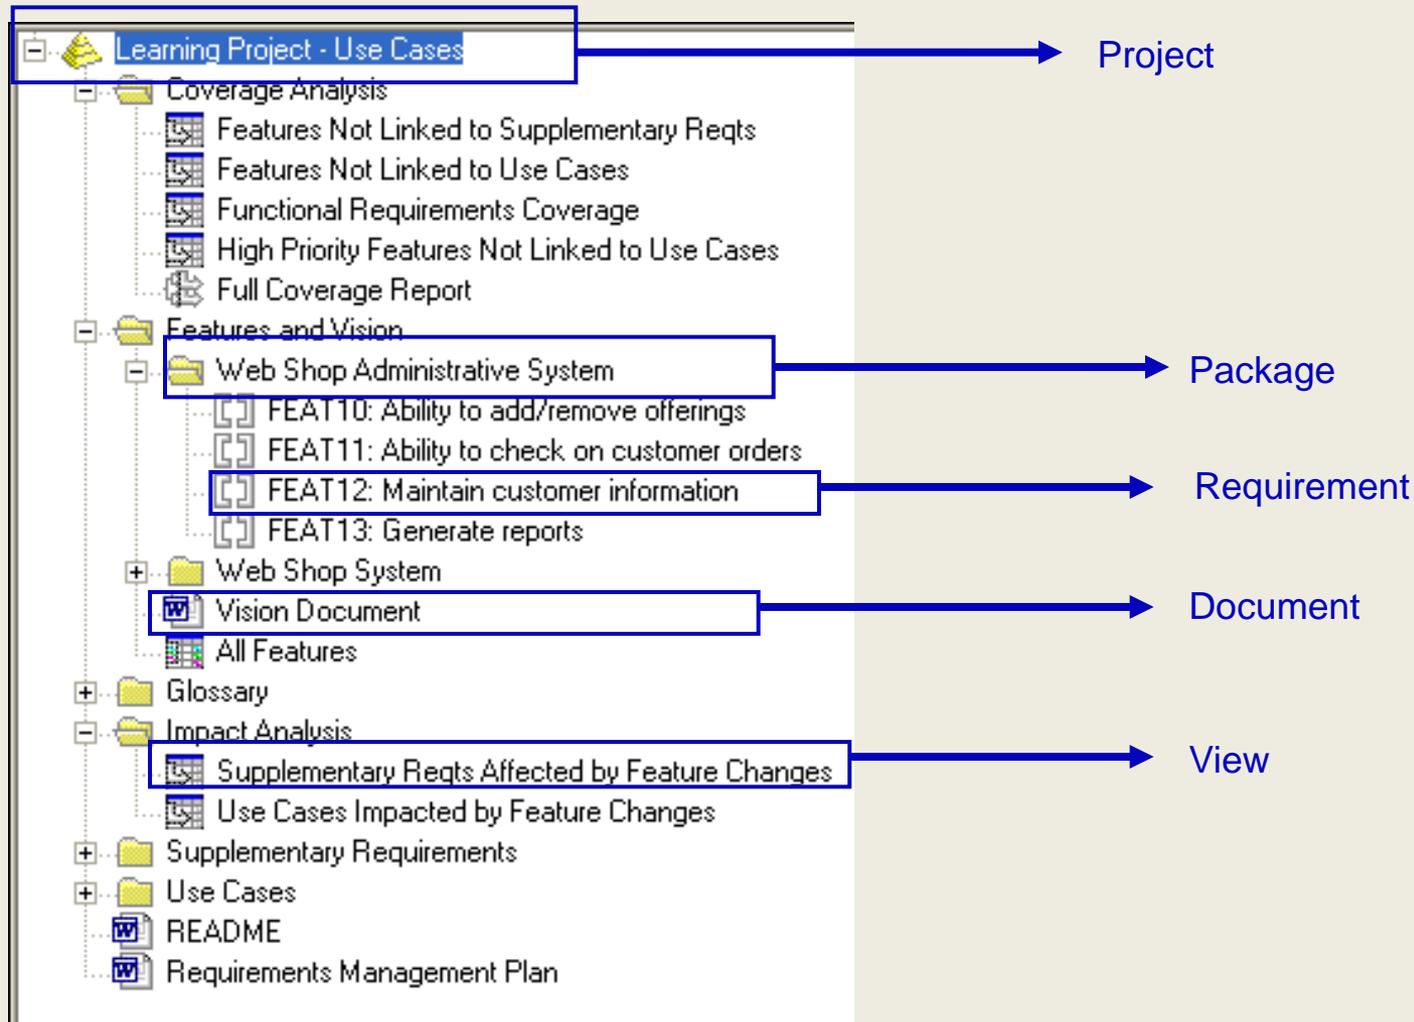

The screenshot displays the Rational RequisitePro interface. The main window shows a list of requirements for a 'Web Shop System'. The requirements are organized into a table with columns for ID, Name, Priority, Status, Impact, and Assignee. The 'FEAT4: Ability to check status of an order' requirement is highlighted.

Requirement ID	Requirement Name	Priority	Status	Impact	Assignee
FEAT3	Search by multiple criteria Ability to search for CDs by multiple criteria	Functional	Approved	Medium	Help Desk
FEAT4	Ability to check status of an order Ability to check the status of an order	Functional	Validated	Low	Partners
FEAT5	E-mail notification of new titles of interest E-mail notification for Shoppers when new titles that may interest them are added to the collection.	Functional	Proposed	Medium	Help Desk
FEAT6	Highly scalable Highly scalable to include many titles and effective searching through those titles	Non-Functional	Proposed	High	Customer visits
FEAT7	Ability to customize the Web site Shoppers should be able to customize the Web site.	Functional	Proposed	Low	High
FEAT8	User registration good for future purchases Shoppers should be able to register once for all purchases; they should not be asked to re-enter personal information.	Functional	Incorporated	Low	Low
FEAT9	Shipping Status Shoppers should be able track any package that has been shipped to them.	Functional	Approved	Medium	Medium
FEAT10	Ability to add/remove offerings Ability to add/remove CDs available for sale	Functional	Proposed	Low	High
FEAT11	Ability to check on customer orders Ability to check on Shopper orders	Functional	Incorporated	High	Medium
FEAT12	Maintain customer information Maintain Shopper information	Functional	Proposed	Medium	Low
FEAT13	Generate reports Generate reports	Functional	Incorporated	Low	Medium
FEAT14	Use Legacy System Use existing legacy Warehouse System for shipping orders.	Functional	Proposed	Medium	Medium
FEAT15	Interactive guide to site through online... The Web site will include an interactive guide in the form of online Help.	Functional	Proposed	Medium	High
	<Click here to create a requirement>	None	Proposed	Medium	Medium

This Learning Project is a simple example of how to use Rational RequisitePro when using use cases.  
We recommend you first open the README document, then the Requirements Management Plan, then the Vision document.

<b>FEAT5: E-mail notification of new titles of interest</b> E-mail notification for Shoppers when new titles that may interest them are added to the collection.	Functional	Web Shop System	Could	Proposed	Medium	Low	Help Desk
<b>FEAT6: Highly scalable</b>	Non-Functional	Web Shop System	Must	Proposed	High	Medium	Customer visits

searching capabilities.

**FEAT4 Ability to check the status of an order**  
After Shoppers make a purchase, they will want to have access to the status of their order.

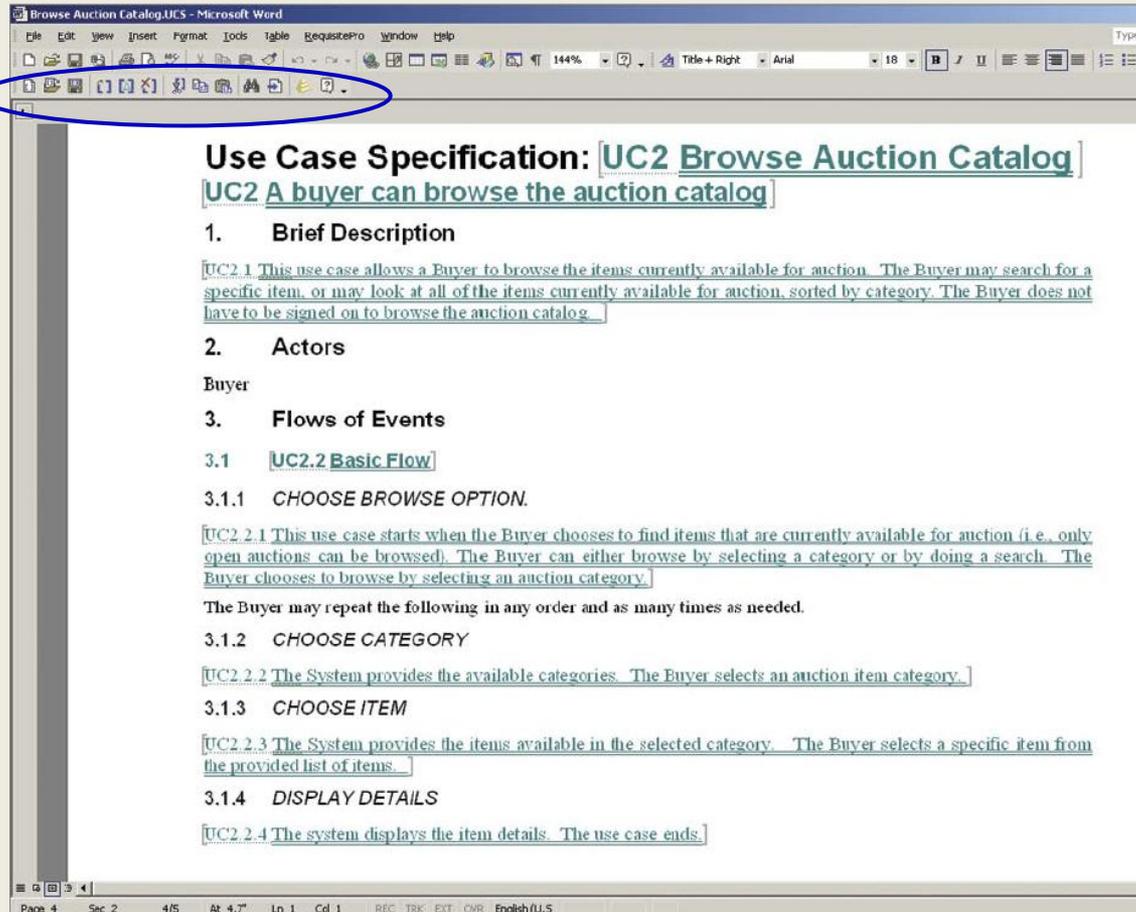

**FEAT5 E-mail notification for Shoppers when new titles that may interest them are added to the collection.**  
Shoppers have requested the ability to be notified when new titles are added to our collection.

**FEAT6 Highly scalable to include many titles and effective searching through those titles**  
We anticipate a minimum of 1,000,000 titles to be available at ClassicsCD.com, so we must ensure that browsing of CD titles is not too painful.

<b>UC3.6: Postcondition: ACCOUNT NOT...</b> This occurs when the Buyer fails to activate his/her account because the Buyer never attempted activation...	Post Condition	Medium	Validated	Medium	Medium	False	1.0005
<b>UC4: Sell Item</b> A Seller can create a new online auction.	Name	Medium	Incorporated	Medium	High	False	1.0010

[UC2.1 This use case allows a Buyer to browse the items currently available for auction. The Buyer may search for a specific item, or may look at all of the items currently available for auction, sorted by category. The Buyer does not have to be signed on to browse the auction catalog.]

# Forum for Discussions

# Web Interface

The screenshot shows the Rational RequisiteWeb web interface in Microsoft Internet Explorer. The browser title is "RequisiteWeb: Attribute Matrix View - Microsoft Internet Explorer". The address bar shows the URL: [http://wco1jheumann/ReqWeb/ReqView\\_Frame.jsp?ViewKey=12&null&ViewPosRow=1](http://wco1jheumann/ReqWeb/ReqView_Frame.jsp?ViewKey=12&null&ViewPosRow=1). The page title is "Rational RequisiteWeb". The main content area displays a table of requirements for "FEAT: All Features".

Requirements	Priority	Status	Contact	Difficul
<a href="#">FEAT1</a> Secure Payment method.	Medium	Validated	Fran	Medium
<a href="#">FEAT2</a> Easy Browsing for available titles.	High	Proposed	Fran	Low
<a href="#">FEAT3</a> Search capabilities	Medium	Validated	Fran	Medium
<a href="#">FEAT4</a> Ability to check the status of an order.	High	Validated	Fran	Low
<a href="#">FEAT5</a> E-mail notification for customers when new titles are added that may be of interest to them.	Medium	Validated	Fran	Medium
<a href="#">FEAT6</a> Highly Scaleable to include many titles and effective searching through those titles.	Medium	Proposed	Fran	Medium

# Discussion

- **Pros:**
  - Databases: MS Access, Oracle, SQL Server, DB2
  - Easy to use
  - Good interfaces and views: Matrix and trees
  - Link between requirements and the source that describes them
  - A forum for discussions with filter tools
  - Integrated into Microsoft Word
- **Cons:**
  - It is only available for Windows
  - It is not free

# Discussion (cont.)

- **Current Version:** 7.1.2
- <http://www.ibm.com/software/awdtools/reqpro/>

# Next Week

- **Topic:** Requirements Elicitation and UML tools
- **Homework:**
  - Read through the slides from previous lectures .
  - Prepare questions regarding project (i.e. any ambiguities, concerns and doubts about the project description should be resolved).
  - Work on the project (team work!)
  - Bring a laptop to the next session with a StarUML installation.

# Submission of the deliverables

- Each team should create an **SVN repository**
  - at e.g. svn.vis.ethz.ch, Google Code, SourceForge, ...
- The file system should have the following structure
  - ...\\svn\\trunk\\**Assignment** <{1,2,3,4,5}>
  - The name of the final file should be:  
[KSE-<team name>]Assignment<{1,2,3,4,5}>.pdf
- Send the link to the repository to your TA.
- The answers will be collected at **midnight** of the submission day.
