

# Project Order

## Objective

The objective of the project is to re-design and re-implement the internet site of the **Caritas Zentrum München-West und Würmtal**, which is a branch of Deutscher Caritas Verband. The current site is found at [http://www.caritasmuenchen-region.de/php/show\\_ze.php?type=z&id=12](http://www.caritasmuenchen-region.de/php/show_ze.php?type=z&id=12). The new web site has to give a more comprehensive presentation of the client's organisation, services, and background. Determining the exact requirements of the client is part of the project.

## Product Sketch

The new website must present all information specified by the client in a structured and appealing way. It has to provide forms of interaction such a form to send email to the client. Moreover, it should be possible for client staff to change the contents of certain web pages (e.g., "Upcoming Events") via web forms in a secure way. The contents of the web site are in German.

The new web site must be compliant with the web style guide of the client. It is required that the web site can be hosted by the existing web server of the client infrastructure.

## Constraints

- The overall number of hours spent on the project should not exceed 96 hours for the whole team.
- Teams should prepare to changes of client-requirements during the project.
