

Focus Specialization in Design, Mechanics and Materials

Prof. Kristina Shea, Prof. Dennis Kochmann,
Prof. Markus Bambach + Colleagues

Outline

- **Introduction and Motivation**
- Lectures
- Bachelor Theses and Research
- Beyond Your Bachelor Degree

Diverse Industry Domains: Beyond the Traditional!

Image credit: Audi

Image credit: robotics & automation news

Renewable Energies

Robotics

Healthcare

Advanced Manufacturing

Interdisciplinary + Addresses Grand Challenges

Understanding global transport processes

Ensuring healthy lives

Addressing sustainable development

Environmental sensing for the future

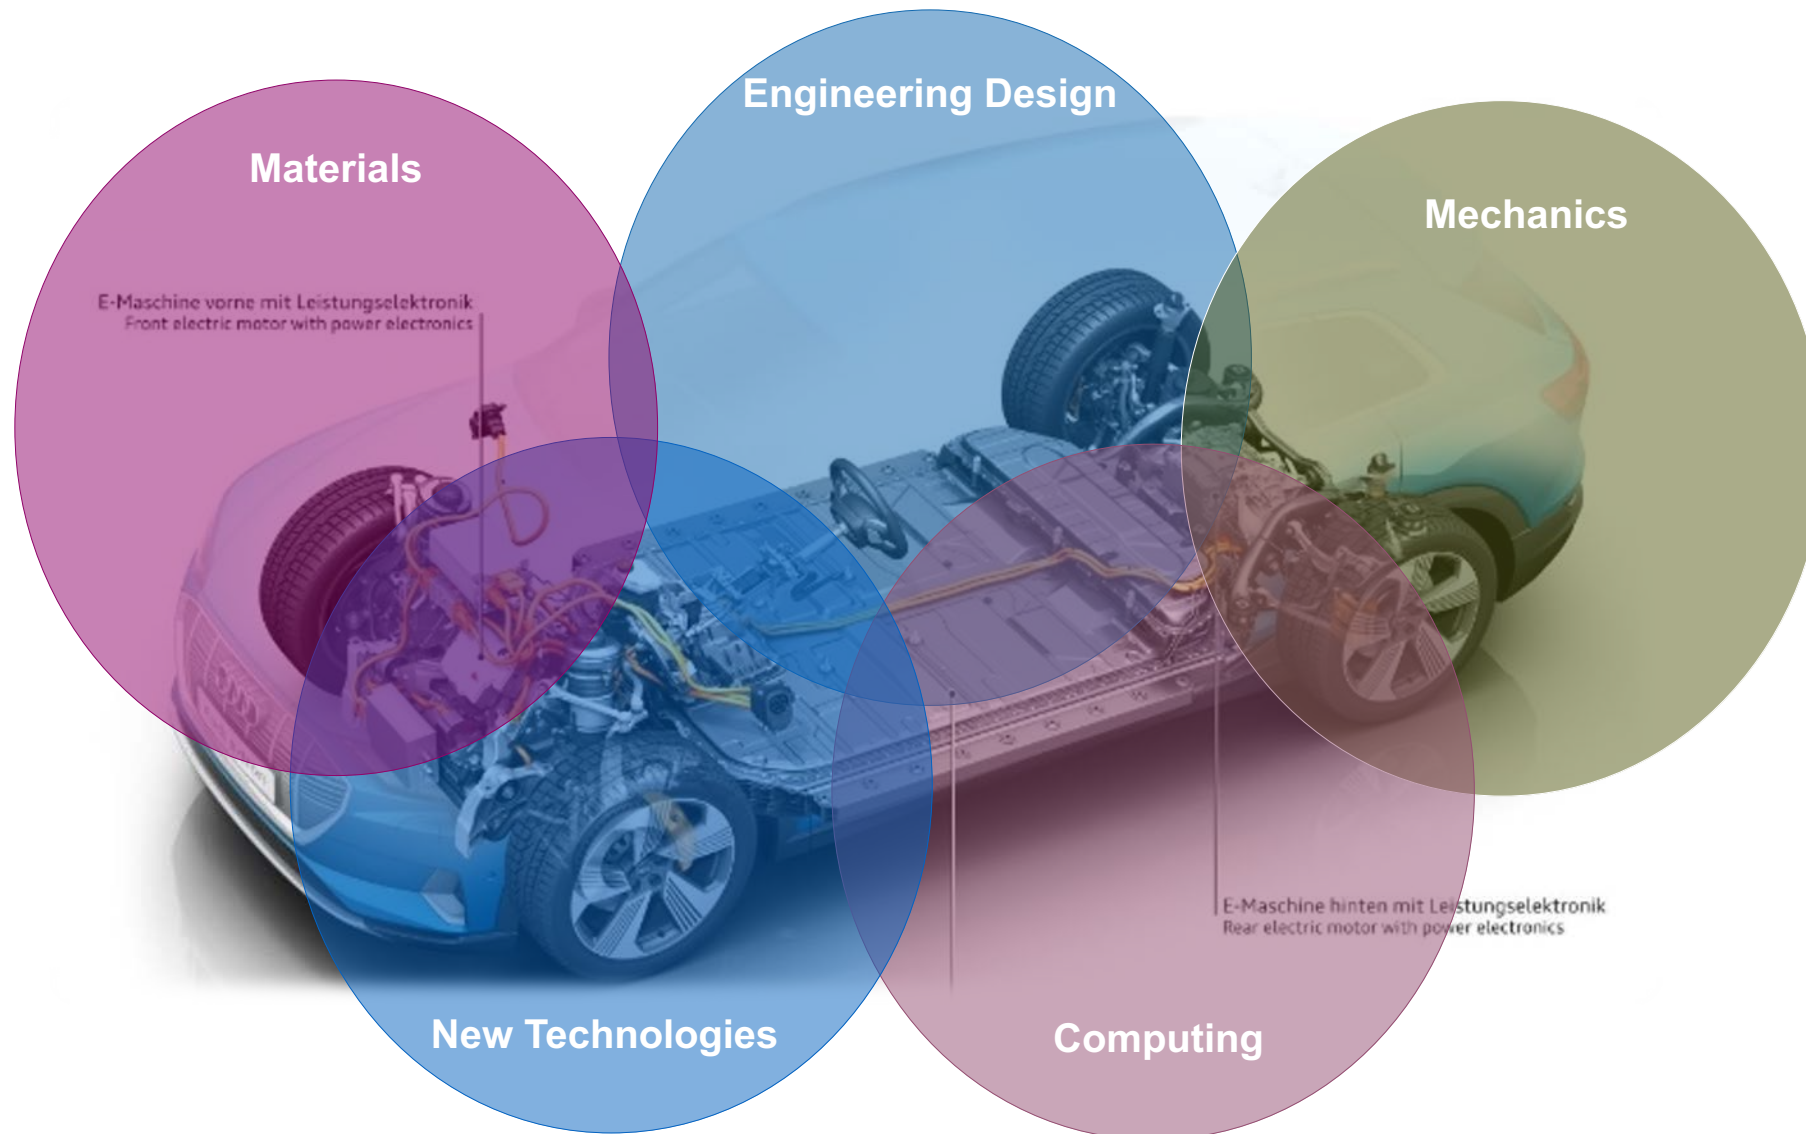

Reinventing manufacturing

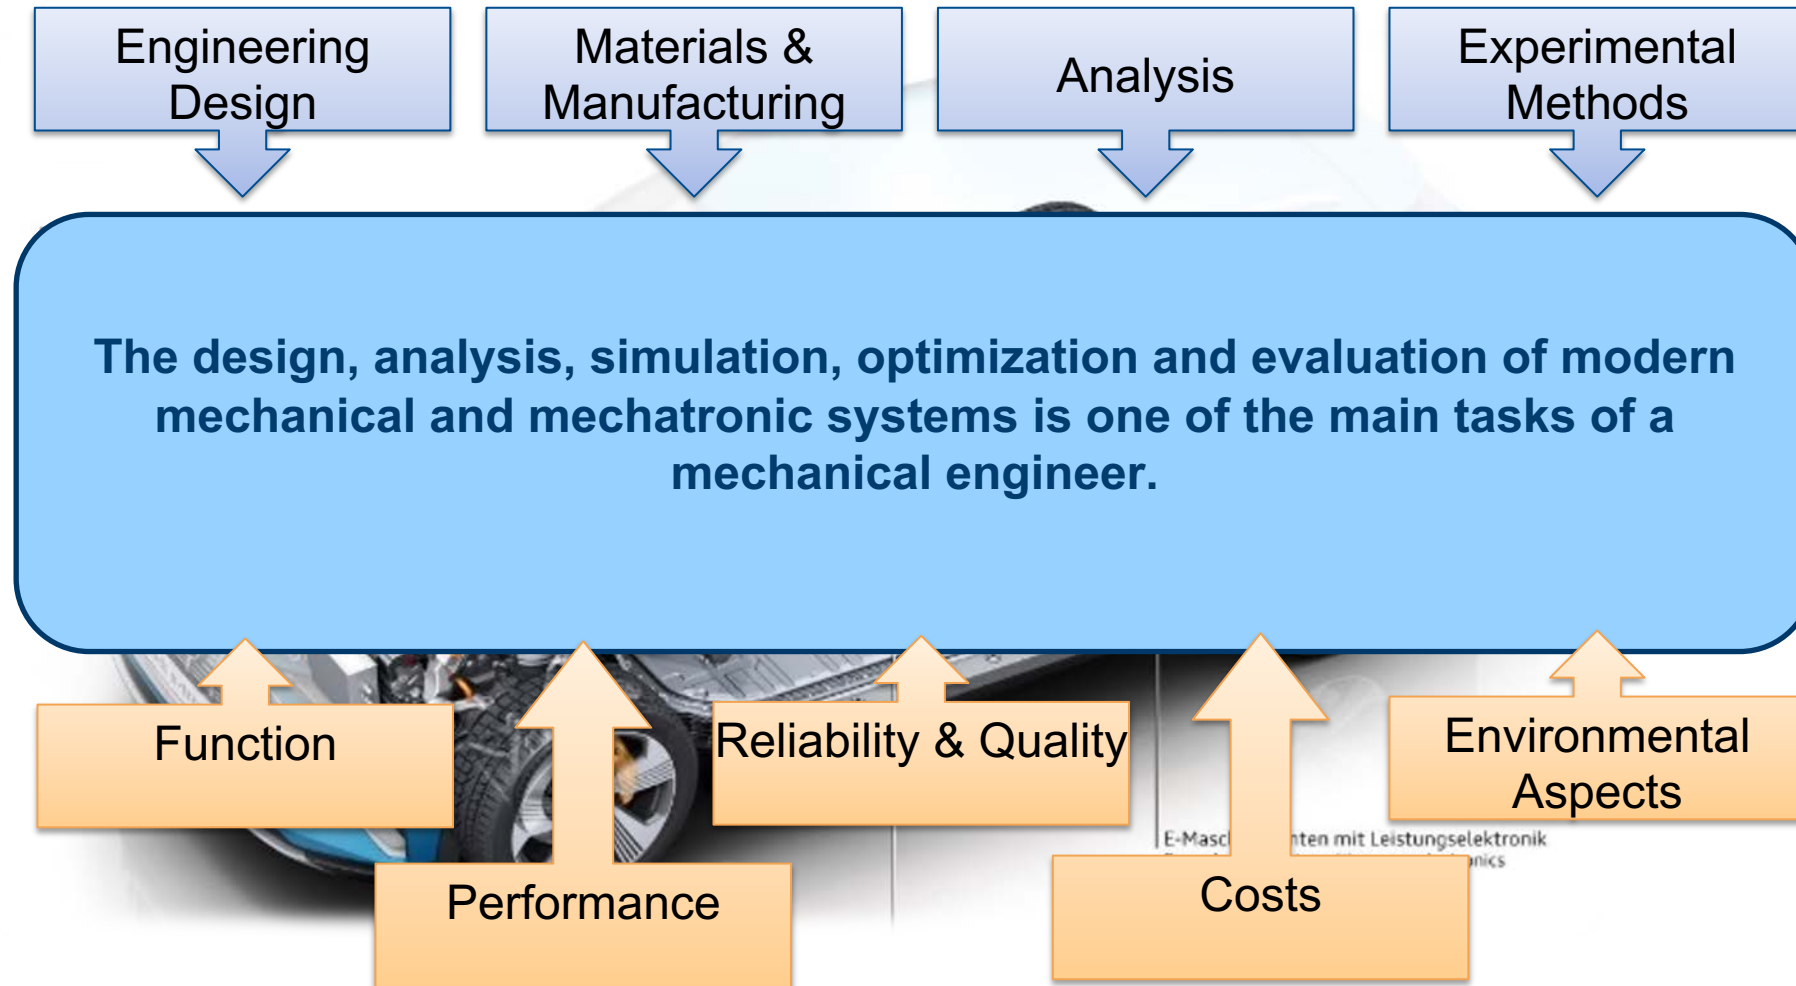

Developing sustainable materials

Mechanical Systems are Highly Interdisciplinary

Mechanical Systems: Design, Mechanics and Materials

The Team

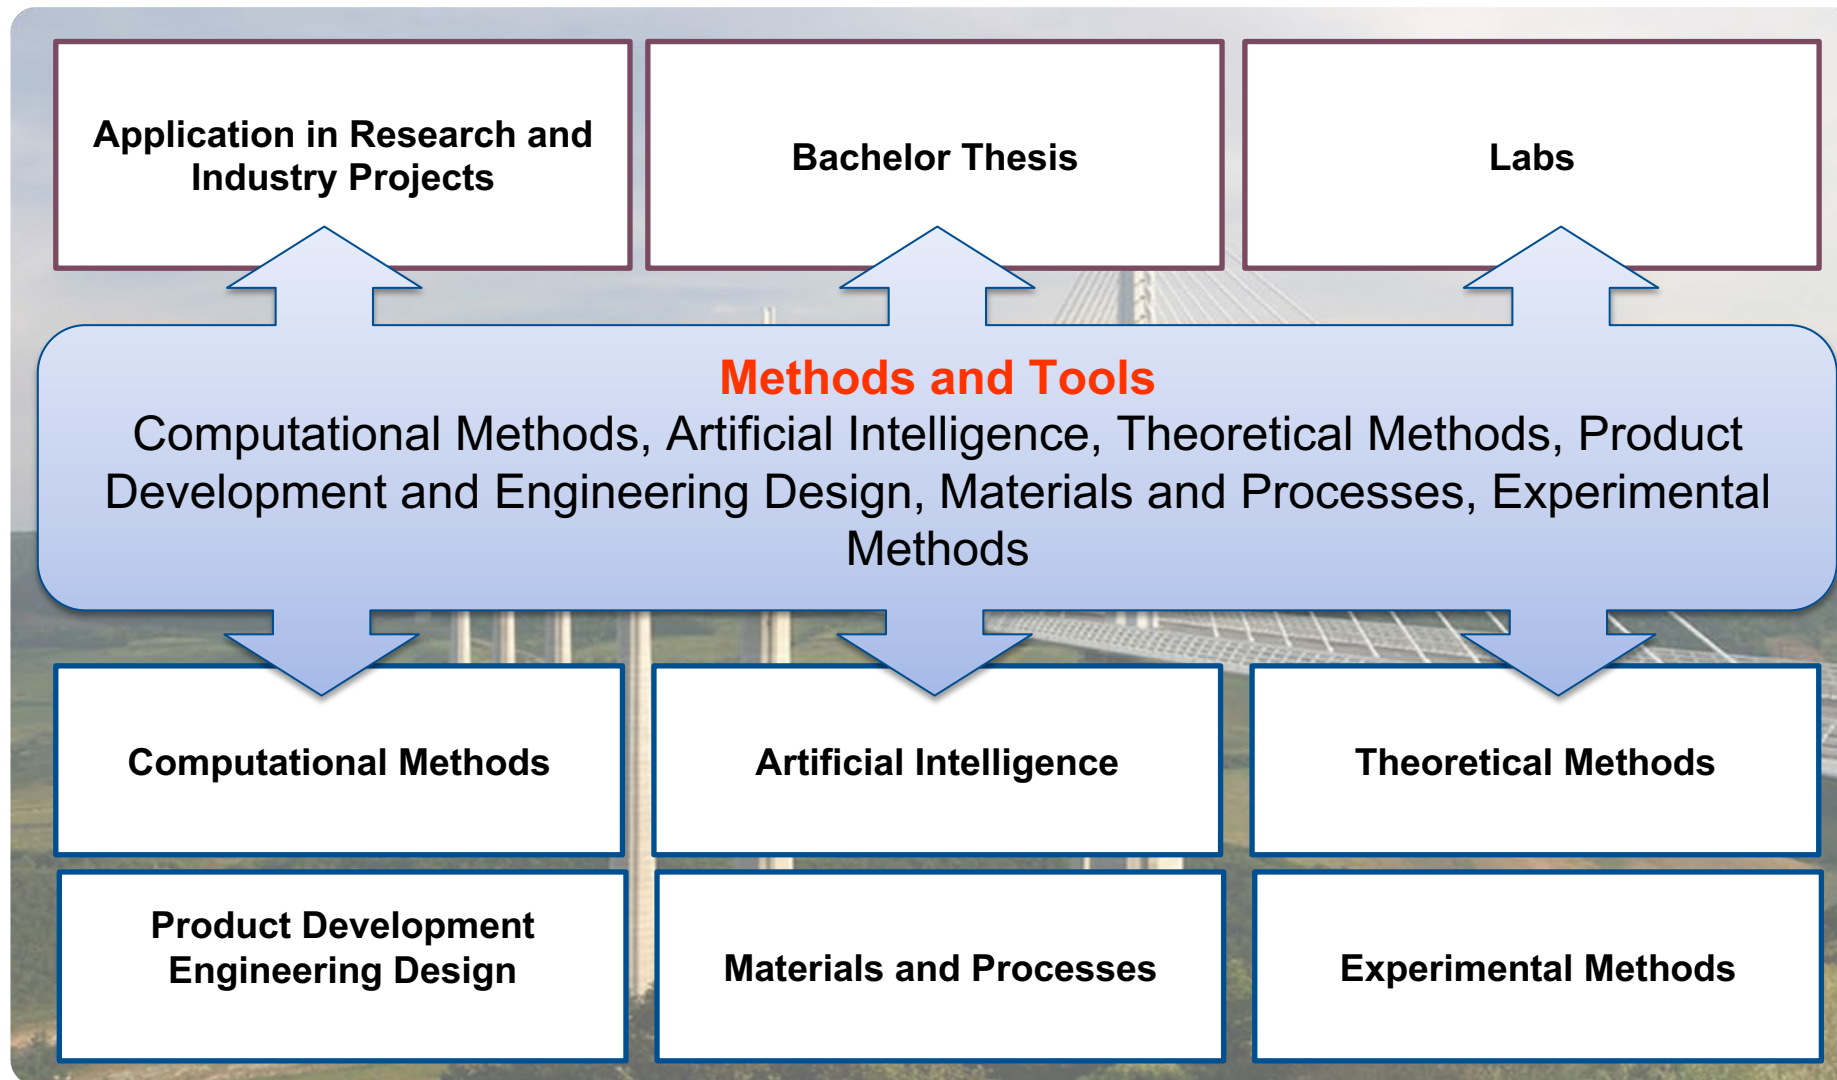

- K. Shea (Design), D. Kochmann (Mechanics), M. Bambach (Materials), D. Ahmed, P. Ermanni, A. Kunz, L. De Lorenzis, E. Mazza, M. Meboldt, D. Mohr, E. Tilley, P. Tiso

Outline

- Introduction and Motivation
- **Lectures**
- Bachelor Theses and Research
- Beyond Your Bachelor Degree

Bachelor Focus

Lecture Overview: You select five lectures freely (plus optionally one “wildcard” lecture)

Courses in Fall Semester

Number	Title	Type	ECTS	Lecturers
Engineering Design				
151-3209-00L	Engineering Design Optimization	W	4	K. Shea, T. Stankovic
151-3213-00L	Integrative Ski Building Workshop	W	4	K. Shea
151-3204-00L	Coaching Innovation Projects	W	2	I. Goller
Mechanics				
151-0364-00L	Lightweight Structures Laboratory	W	4	M. Zogg, P. Ermanni
151-3207-00L	Lightweight	W	4	P. Ermanni
151-0509-00L	Acoustics in Fluid Media: From Robotics to Additive Manufacturing	W	4	D. Ahmed
151-0524-00L	Continuum Mechanics I	W	4	A. E. Ehret
151-0544-00L	Metal Additive Manufacturing - Mechanical Integrity and Numerical Analysis	W	4	E. Hosseini
151-0833-00L	Applied Finite Element Analysis	W	4	B. Berisha
Materials				
327-1204-00L	Materials at Work I	W	4	R. Spolenak, R. Koopmans
151-0741-00L	Sustainable Materials	W	4	L. Deillon

Lecture Overview: You select five lectures freely (plus optionally one “wildcard” lecture)
 Courses in Spring Semester

Number	Title	Type	ECTS	Lecturers
Engineering Design				
151-3202-00L	Product Development and Engineering Design	W	4	K. Shea, T. Stankovic, E. Tilley
151-0306-00L	Visualization, Simulation and Interaction - Virtual Reality I	W	4	A. Kunz
151-0332-00L	Interdisciplinary Product Development: Definition, Realisation and Validation of Product Concepts	W	4	M. Schütz
151-0522-00L	Case Studies in Computer Aided Engineering - Applied FEM	W	4	D. Valtorta
151-0840-00L	Optimization and Machine Learning	W	4	B. Berisha, D. Mohr
Mechanics				
151-0515-00L	Continuum Mechanics 2	W	4	E. Mazza, R. Hopf
151-0518-00L	Introduction to Finite Element Analysis	W	4	D. Kochmann
151-0540-00L	Experimental Mechanics	W	4	P. Carrara
151-0552-00L	Fracture Mechanics	W	4	L. De Lorenzis
151-0534-00L	Advanced Dynamics	W	4	P. Tiso
Materials				
151-0324-00L	Engineering Design with Polymers and Polymer Composites	W	4	G. P. Terrasi
327-3002-00L	Materials for Mechanical Engineers	W	4	R. Spolenak, A. R. Studart, R. Style
151-0740-00L	Metal Additive Manufacturing – Fundamentals and Process Technology	W	4	M. Bambach, L. Deillon, M. R. Tucker

Please see the websites of each professor for current available student projects and theses!

- **Design:** Prof. Kristina Shea, Engineering Design and Computing Laboratory <https://edac.ethz.ch/>
- **Mechanics:** Prof. Dennis Kochmann, Mechanics and Materials Laboratory <https://mm.ethz.ch/>
- **Materials:** Prof. Markus Bambach, Advanced Manufacturing Lab <https://www-advanced-anufacturing.ethz.ch>
- Prof. Paolo Ermanni, Laboratory of Composite Materials and Adaptive Structures <https://structures.ethz.ch/>
- Prof. Andreas Kunz, Innovation Center Virtual Reality, https://www.icvr.ethz.ch/index_EN
- Prof. Laura De Lorenzis, Computational Mechanics Group <https://compmech.ethz.ch/>
- Prof. Edoardo Mazza, Experimental Continuum Mechanics <https://ecm.ethz.ch/>
- Prof. Mirko Meboldt, pd|z Product Development Group Zurich <https://pdz.ethz.ch/>
- Prof. Dirk Mohr, Computational Modelling of Materials in Manufacturing <https://mohr.ethz.ch/>
- Prof. Elizabeth Tilley, Global Health Engineering <https://ghe.ethz.ch>
- Dr. Paolo Tiso, Nonlinear Dynamical Systems Group <http://www.georgehaller.com/>
- Prof. Daniel Ahmed, Acoustic Robotics Systems Lab <https://arsl.ethz.ch/>

For the Product Development and Engineering Design course of the 2022 spring semester, students were asked to design, develop, and prototype an accessible latrine pump for a low- resource setting.

Integrative Ski Design and Fabrication Workshop

Design – CAD – Mechanics – Sustainable Materials – Testing

Prof. Elizabeth Tilley

Global Health Engineering: *understanding the social, economic, and technical reasons for poor environmental and human health*

We work with small businesses, NGOs, government and openly available data to test, design and optimize technologies and systems related to:

Human Excreta

Air Quality

Solid Waste

Organic Waste

Prof. Kristina Shea, Engineering Design and Computing Laboratory

We combine engineering design, computation and fabrication to design and prototype creative engineering systems with new functionalities that help to achieve sustainable development goals. We are both curiosity and impact driven.

Designing Novel Machines with 4D Printing

Computational Design of Structures and Metamaterials

Design for Additive Manufacture and 3D Printed Material Characterization

Development Engineering: Low-Cost Ventilator

Mechanics

Computational Modelling

Dynamical Systems & Acoustics

Theory, Material Modelling & Dimensioning

Experimental Techniques

Architected materials for bionic implants

3D-printing and imperfections

Inverse design by machine learning

Material modeling

Wave motion

Prof. Laura De Lorenzis Computational Mechanics Group

Experimental investigations on different types of fracture phenomena

X-ray tomography + in-situ testing and Digital Volume Correlation for cavitation and fracture phenomena or for 3D full-field data collection on different material behaviors

010010101010101

Material model + Uncertainty

$$W = \frac{1}{2} (I_1 - 3) + \frac{3}{2} (J - 1)^2$$

or

Neural Cellular Automata,
Physics Informed Neural Networks

Efficient Unsupervised Constitutive Law Identification and Discovery (EUCLID)

Dr. Paolo Tiso

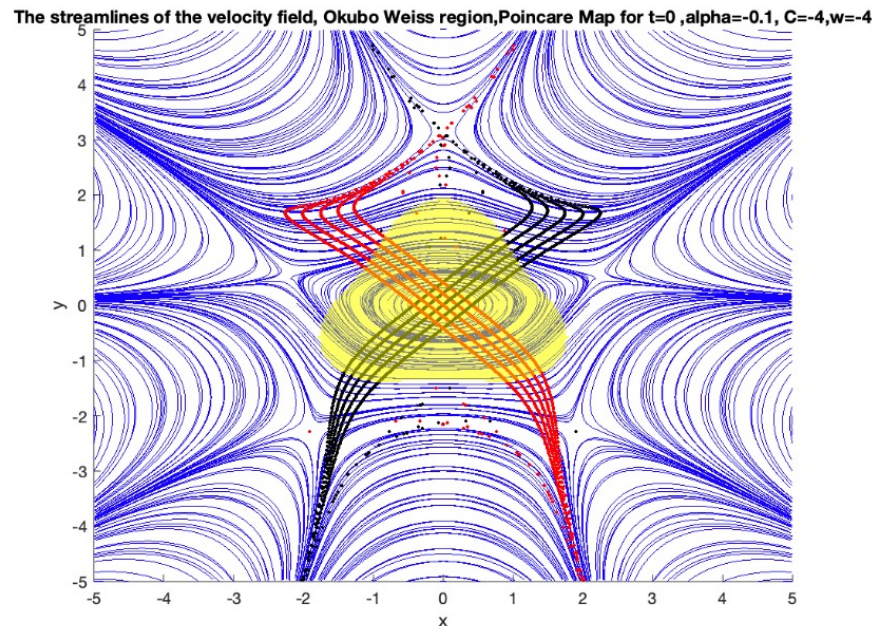

Nonlinear Dynamical Systems Group

Explicit Navier-Stokes solutions and their analysis via local vortex criteria and tools from dynamical systems

A quartic polynomial solution to the Navier-Stokes equation has the following form [1]:

$$\mathbf{u}(\mathbf{x}, t) = \begin{pmatrix} \sin(4t) & \cos(4t) + 2 \\ \cos(4t) - 2 & -\sin(4t) \end{pmatrix} \mathbf{x} + \alpha(t) \begin{pmatrix} x^4 - 6x^2y^2 + y^4 \\ -4x^3y + 4xy^3 \end{pmatrix}$$

The intersecting stable and unstable manifolds of the fixed point of the Poincaré map show a very complex particle motion in stark contrast to the vortical motion suggested by both the instantaneous streamlines and the Okubo-Weiss criterion [1].

[1] L. Hillegaart. *Analysis of nonlinear dynamical systems applied on explicit polynomial solutions to the unsteady planar Navier-Stokes equation (BSc Thesis)*, 2020

The ECM group ...

- investigates the **mechanics of biological and biomedical materials**, including implants, prostheses or scaffolds for tissue engineering.
- uses **advanced experimental and computational methods** to understand these material systems from sub-cellular to organ level.
- designs experiments and develops models to **analyze the mechanical integrity of engineering materials**.
- offers **Bachelor projects** on

Study the mechanics
of living materials

Analyze modern
engineering materials

Develop biomedical devices

Prof. Daniel Ahmed Acoustic Robotics Systems Lab

Acoustic actuator

Fundamental of Acoustic μ bots

Translational Microrobots and
Implants for Brain

Sound-assisted Printers
for Composites, Cardiac
Constructs, etc.

Advanced Manufacturing

Professor Markus Bambach

Additive manufacturing

Thermally auxetic structures

Multi-material sintering

Laser materials processing

Directed energy deposition head with six individually adjustable diode lasers for beam shaping

Materials design / sustainable materials

New rare-earth metal free high-strength Al-alloys for AM

Lightweight design & structural performance

Computational and data-driven manufacturing

Adaptive SPH code (simulation of LPBF)

Data-driven printing sequence planning for minimization of temperature gradients

Shortest process time

Lowest thermal gradient

- Automotive
- Aerospace
- Space
- Rail
- Robotics
- Manufacturing
- Additive Manufacturing
- Product Development and Consumer Products
- Buildings and Civil Structures
- Energy
- Sports Industries
- Biomedical and Medical Technology
- Many more!

Relevant Master Studies

- Mechanical Engineering
- Micro and Nanosystems
- Robotics, Systems and Control
