

The Production of Nanoparticles by EHDA

and
some other aerosol surprises

10 ys PTL/ETH Symposium
July 4-8, 2008
Zurich, Switzerland

Jan C.M. Marijnissen
TU Delft. DCT, The Netherlands

Ambrose and William Gilbert have placed this tomb In memory of brotherly piety, To William Gilbert, Senior, Gentleman, and doctor of medicine. This, the eldest son of Jerome Gilbert, Gentleman, was born in the town of Colchester, studied the art of medicine at Cambridge, practiced the same for more than thirty years at London, with singular credit and success. Hence called to Court, he was received with highest favor by Queen Elizabeth, to whom, and to her successor James, he served as chief physician. He composed a book celebrated among foreigners concerning the magnet for nautical science. He died in the year of the Human Redemption 1603, the last day of November, in the 63d year of his age.

vetur. Si aëris sit affluxus, & imperus versus corpus: quomodo exi-
gus Adamas, quantitate oribi, potest tantum aëris accessere, ut
rappat majusculum corpus longum in æquilibrio positum (circa al-
teram tantum finis minimam partem aëre allesto)? Oportebat et-
iam consistere, aut tardius movere, antequam corpus feriret, præ-
terea si latius fuerit & planum succinum, ex congregatione aëris
in facie succini, & refluxione. Si quia tenuiora effluunt, & in-
crassata revertuntur, (ut in spiritalibus) tunc potius motum habe-
ret corpus ad electricum paulo post principium applicationis; sed
cum celerius applicatur versorio fricata electrica, tum
si maxime appellat versorium, magisq; in propin-
quitate crassiori in tenuius ma-
latere sic

It plainly attracts the body itself in the case of a spherical drop of water
standing on a dry surface; for a piece of amber held at suitable distance
pulls towards itself the nearest particles and draws them up into a cone.

Si quia tenuiora effluunt, & in-
crassata revertuntur, (ut in spiritalibus) tunc potius motum habe-
ret corpus ad electricum paulo post principium applicationis; sed
cum celerius applicatur versorio fricata electrica, tum
si maxime appellat versorium, magisq; in propin-
quitate crassiori in tenuius ma-

Silex teritur & emittit ab attritione materiam inflammabi-
lem, in scintillas & ardores conversam. Silex attri-
ora concipientia ignem longè plurimum ab electricis effluvijs dis-
ferunt, quæ propter summam tenuitatem ignem non concipiunt, *est materi-*
nec summæ sunt materia idonea. Effluvia illa non sunt flatus, *am inflamo-*
nam emissa non impellunt quicquam, sed absq; ullâ sensibili rei-
nentia effluunt, & attingunt corpora. Humores sunt summè at-
tenuati, aëre ambiente multò subtiliores, qui ut fiant requiruntur
corpora ab humore prognata & majori duritie concreta. Non ele-
ctrica corpora non solvuntur in effluvia humida, illaq; effluvia *Electrica*
sunt peculiaris & generalibus telluris effluvijs miscentur, nec *corpora nō*
sunt peculiaris. Etiam præter attractionem corporum, retinent ea *solvuntur*
durius. Verisimile est igitur succinum exspirare aliquod peculiare, *in effluvia*
quod corpora ipsa alliciat, non aërem intermedium: corpus verò *humida,*
docet ipsum manifestò in aquæ globosâ guttâ positâ supra siccum, *Succinum*
nam Succinum appositum, in convenienti distantia, proximas con- *allicit cor-*
vellit partes, & educit in Conum: Alioquin si ab aëre ruente addu- *pora non*
ctur, gutta torâ inclinaret. *aërem.*

Electrohydrodynamic Atomization in the Cone-Jet Mode

Scaling of droplet size and current EHDA cone-jet mode

For the current scaling for liquids with a flat radial velocity profile in the jet

$$I = b(\gamma K Q)^{\frac{1}{2}}$$

The droplet diameter for the varicose break-up mode is

$$d_{d,v} = c \left(\frac{\rho \varepsilon_0 Q^4}{I^2} \right)^{\frac{1}{6}}$$

Substituting equation 1 into equation 2 yields:

$$d_{d,v} = \left(\frac{16 \rho \varepsilon_0 Q^3}{\gamma K} \right)^{\frac{1}{6}}$$

Cic. Why, saw you any thing more wonderful?

Casca. A common slave—you know him well
by sight—

Julius Caesar III.14-24

Shakespeare

Held up his left hand, which did flame and burn
Like twenty torches join'd; and yet his hand, 17
Not sensible of fire, remain'd unscorch'd.

Besides,—I have not since put up my sword,—
Against the Capitol I met a lion, 20

Who glar'd upon me, and went surly by,
Without annoying me; and there were drawn
Upon a heap a hundred ghastly women,
Transformed with their fear, who swore they

saw 24

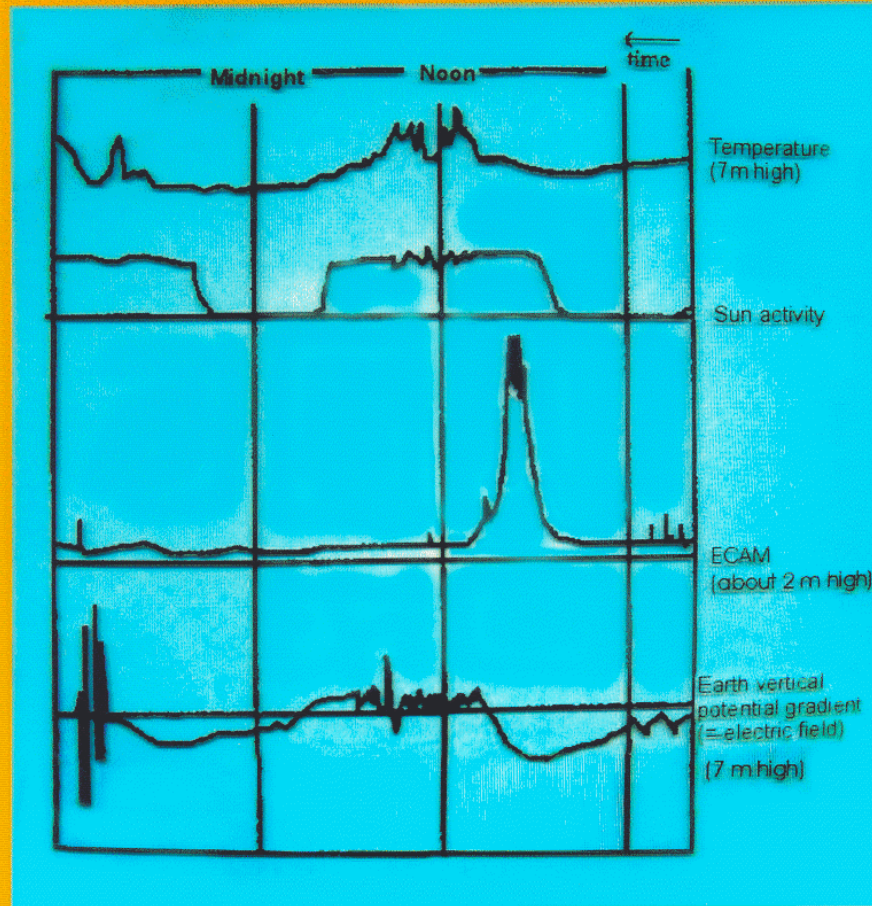

Men all in fire walk up and down the streets

Formule 1 $N(t)/N_0 = \exp [-V_{TE} t / H]$

Formule 2 $Z = ne C_c / 3 \mu \eta d$

Formule 3 $V_{TE} = ZE = ne E C_c / 3 \mu \eta d$

$N(t)$ = aantal deeltjes op tijdstip t per volume (concentratie)

N_0 = aantal deeltjes op tijdstip 0 per volume (concentratie)

V_{TE} = de snelheid van de deeltjes

H = afstand tussen coronabron en counterelectrode

Z = elektrische mobiliteit

ne = aantal elementaire ladingen

Also applicable in street/canyon etc.
