

The FCO Cockpit – Global Bubble Status Report

Peter Cauwels & Didier Sornette
Chair of Entrepreneurial Risk

February 1st, 2016

The FCO Cockpit – Global Bubble Status February 1st, 2016

What is this?

This monthly report discusses the historical evolution of bubbles in and between different asset classes and geographies.

It is the result of an extensive analysis done on the historical time series of 433 systemic assets and 815 single stocks. The systemic assets are bond, equity and commodity indices and a selection of currency pairs. The single stocks are mainly US and European, equities.

In the first part of this report, we present the state of the world, based on the analysis of the systemic assets. In the second part, we zoom in on the bubble behavior of single stocks and discuss some specific cases.

⁺ For an intuitive explanation of the methodology and the specifics of the indicators that are used in this report, we refer to: D. Sornette and P. Cauwels, *Financial bubbles: mechanisms and diagnostics*. *Review of Behavioral Economics* 2 (3), 279-305 (2015) (<http://arxiv.org/abs/1404.2140> and <http://ssrn.com/abstract=2423790>)

The FCO Cockpit – Global Bubble Status February 1st, 2016

general result

The FCO Cockpit – Global Bubble Status February 1st, 2016

A positive bubble signal is an indication of herding when people start buying because prices go up.
A negative bubble signal is an indication of herding when people start selling because prices go down.

Main results

Markets are driven by a sell-off in commodities. Around 40% of our indices show negative bubble signals. The effect is seen across all commodities: energy, soft and metals. This is the result of herding. People sell the asset class because the price goes down. The result is a positive feedback mechanisms and mispricing.

The commodities sell-off has spill-over effects in other asset classes. This can be seen as strong negative bubble signals in:

- Corporate bonds mainly in mining, oil & gas, basic resources, industrial metals ...
- Country stock indices mainly in the United Arab Emirates, and other exporters like Canada, Brazil, ...
- Currencies of commodity exporting countries like South Africa, Norway, Canada, Russia ...

The FCO Cockpit – Global Bubble Status February 1st, 2016

results per asset class

The FCO Cockpit – Global Bubble Status February 1st, 2016

commodities

39% of the commodity indices that were analyzed show negative bubble signals.

The effect is seen across all commodities: energy, soft and metals. It is the result of herding. People sell the asset class because the price goes down. This results in a positive feedback mechanisms and mispricing.

This sell off has a strong impact on corporate bonds and currencies of exporting countries.

The FCO Cockpit – Global Bubble Status February 1st, 2016

bond indices

The sell off in commodities has a clear spill-over effect in corporate bonds, mainly in mining, oil & gas, basic resources, industrial metals ...

We see that 9% of all bond indices that were analyzed show negative bubble warning signals.

bond indices

The FCO Cockpit – Global Bubble Status February 1st, 2016

currencies

The sell off in commodities has a spill-over effect in currencies of commodities exporting countries.

We see that 14% of all the currency pairs that were analyzed show bubble warning signals.

Additionally, what is striking is the bubble signal on the GBP/USD exchange rate.

The FCO Cockpit – Global Bubble Status February 1st, 2016

stock indices

The sell off in commodities has a spill-over effect in the stock indices of commodities exporting countries like United Arab Emirates, Canada, Brazil ...

The strong negative effect on stocks in commodities related sectors can also clearly be observed.

The clear negative bubble signal in European banks is striking.

The FCO Cockpit – Global Bubble Status February 1st, 2016

single stocks

The FCO Cockpit – Global Bubble Status February 1st, 2016

What is this?

For 815 stocks we calculate the bubble warning indicators as well as two newly-developed financial strength indicators.

The stocks are the constituents of the Stoxx Europe 600, the S&P 500 and the Nasdaq 100 indices. From these, all doubles and stocks with incomplete data are removed. Because our financial strength indicators are specifically designed for corporates, all financial institutions are taken out of the set as well.

The two financial strength indicators are:

- A value score that is based on the ROIC (Return on Invested Capital) taking into account the EV (Enterprise Value) to normalize for high/low market valuations and/or high/low debt;
- A growth score that has characteristics similar to the PEG ratio, which is the Price to Earnings ratio normalized for expected EPS-growth (Earnings per Share).

Both scores give a value between zero and one, one being the best of the set and zero the worst, so the higher the score, the higher the financial strength.

The FCO Cockpit – Global Bubble Status February 1st, 2016

The four quadrants: financial strength versus bubble score

By aggregating the bubble scores and the financial strength scores, we can divide the stocks into four quadrants:

1. [Quadrant 1](#): Stocks with a strong positive bubble score and a strong financial strength (e.g. Ryanair);
2. [Quadrant 2](#): Stocks with a strong positive bubble score and a weak financial strength (e.g. Amazon);
3. [Quadrant 3](#): Stocks with a strong negative bubble score and a weak financial strength (e.g. Anglo American);
4. [Quadrant 4](#): Stocks with strong negative bubble score and a strong financial strength (e.g. Ryder Systems).

The FCO Cockpit – Global Bubble Status February 1st, 2016

Each quadrant has its own specs:

1. Quadrant 1: These stocks have a strong financial strength. As the financial strength scores are normalized for Enterprise Value, they can still be considered as relatively cheap. The strong positive bubble signal should be interpreted as a momentum indicator possibly the consequence of a repricing based on the fundamentals. **As an investor, one could be a trend-following buyer.**
2. Quadrant 2: These stocks have a weak financial strength. They can be considered as very expensive relative to their financial performance. The strong positive bubble signal is an indication of sentiment and herding increasing the price until it is not linked to fundamentals anymore. **As an investor, one could be a contrarian seller.**
3. Quadrant 3: These stocks have a weak financial strength. They can be considered as very expensive relative to their financial performance. On top of that, there are clear negative bubble signals. Such stocks should be considered as falling knives. **As an investor, one could be a trend-following seller.**
4. Quadrant 4: These stocks have a strong financial strength. They can be considered as very cheap relative to their financial performance. The strong negative bubble signal is an indication of sentiment and herding. These stocks can be considered as over-sold. **As an investor, one could be a contrarian buyer.**

The FCO Cockpit – Global Bubble Status February 1st, 2016

The four quadrants: financial strength versus bubble score

By aggregating the bubble scores and the financial strength scores, we can divide the stocks into four quadrants:

1. [Quadrant 1:](#) Stocks with a strong positive bubble score and a strong financial strength (e.g. Ryanair);
2. [Quadrant 2:](#) Stocks with a strong positive bubble score and a weak financial strength (e.g. Amazon);
3. [Quadrant 3:](#) Stocks with a strong negative bubble score and a weak financial strength (e.g. Anglo American);
4. [Quadrant 4:](#) Stocks with strong negative bubble score and a strong financial strength (e.g. Ryder Systems).

The FCO Cockpit – Global Bubble Status February 1st, 2016

The four quadrants: financial strength versus
bubble score

By aggregating the data, the four quadrants can also be constructed for sectors:

1. [Quadrant 1](#): Sectors with an average positive bubble score and a strong financial strength;
2. [Quadrant 2](#): Sectors with an average positive bubble score and a weak financial strength;
3. [Quadrant 3](#): Sectors with an average negative bubble score and a weak financial strength;
4. [Quadrant 4](#): Sectors with an average negative bubble score and a strong financial strength.

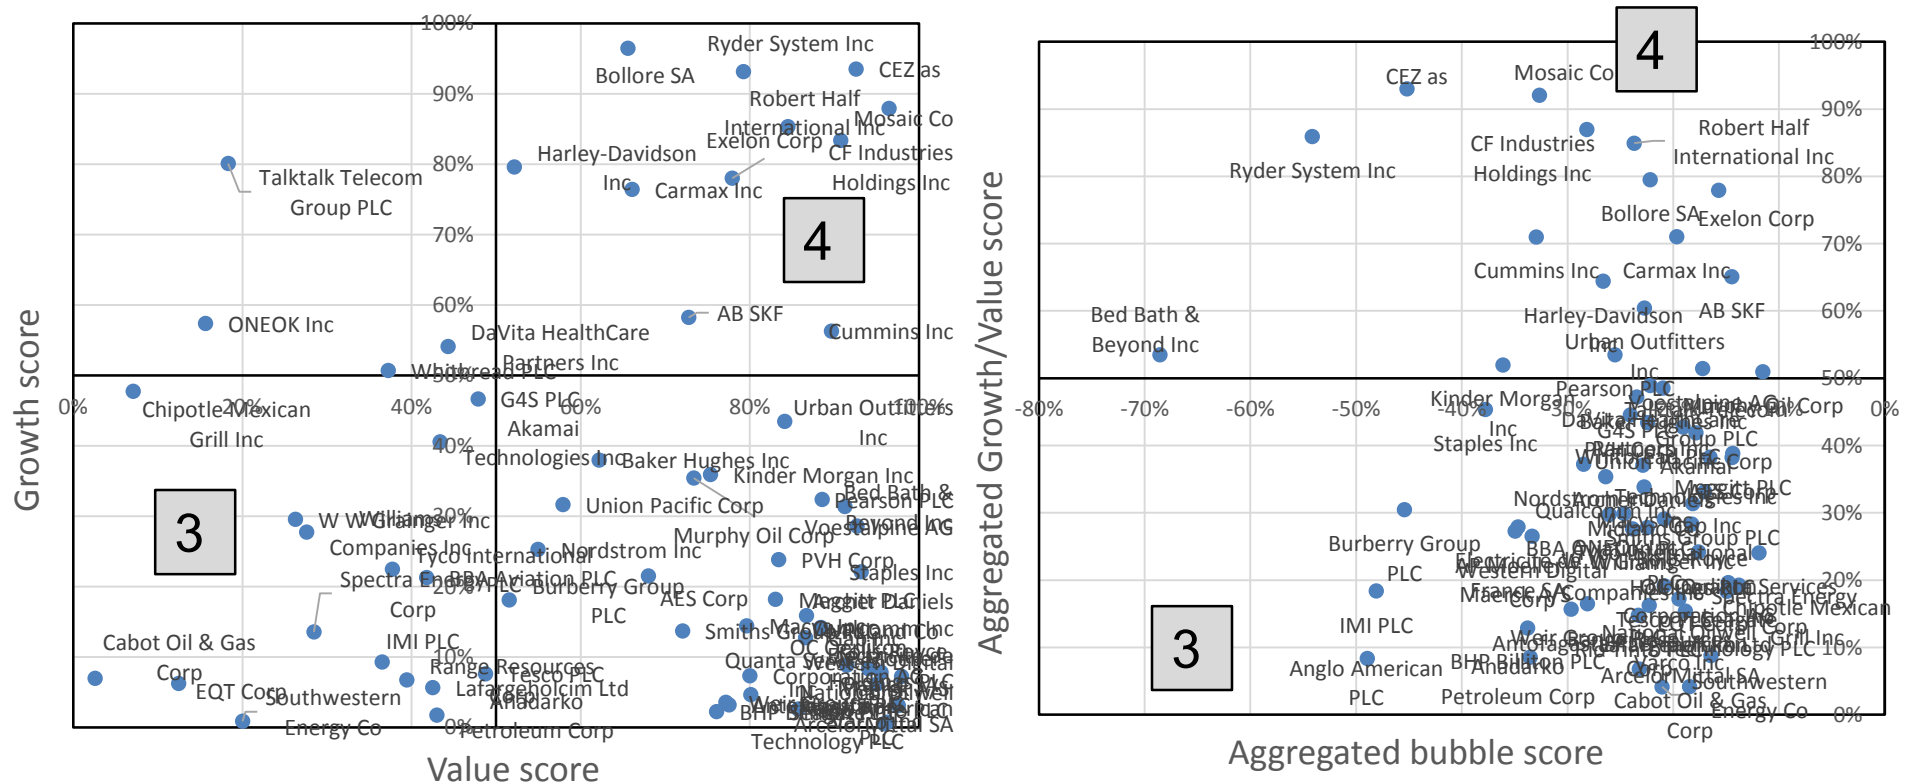

The FCO Cockpit – Global Bubble Status February 1st, 2016

Quadrant 1 and 2 stocks: positive bubble signals with strong respectively weak fundamentals

The FCO Cockpit – Global Bubble Status February 1st, 2016

Quadrant 3 and 4 stocks: negative bubble signals with strong respectively weak fundamentals

The FCO Cockpit – Global Bubble Status February 1st, 2016

Quadrant 1 stocks: strong positive bubble signals with strong fundamentals

Quadrant 1	Country of Headquarters	GICS Sector Name	GICS Industry Group Name	Yearly Return	DS LPPL Trust	DS LPPL Confidence	Bubble all	Value score	Growth score	Financial strength Score
Ryanair Holdings PLC	Ireland	Industrials	Transportation	34.2%	14.0%	23.2%	18%	73%	94%	83%
Thales SA	France	Industrials	Capital Goods	45.0%	21.5%	12.1%	16%	43%	87%	61%
Vestas Wind Systems A/S	Denmark	Industrials	Capital Goods	74.7%	14.3%	10.8%	12%	46%	94%	66%

The FCO Cockpit – Global Bubble Status February 1st, 2016

Quadrant 1 stocks: strong positive bubble signals with strong fundamentals, example Ryanair.

Left graph is a standard output from the Financial Crisis Observatory. It shows the historical price evolution of the stock in blue (left hand scale) and the calculated bubble warning index DS LPPL Trust in red (right hand scale). We can see a clearly spiking warning. The right graph shows the outperformance of the stock over the last five years (orange) with respect to the Eurostoxx benchmark (purple).

The FCO Cockpit – Global Bubble Status February 1st, 2016

Quadrant 2 stocks: strong positive bubble signals with weak fundamentals

Quadrant 2	Country of Headquarters	GICS Sector Name	GICS Industry Group Name	Yearly Return	DS LPPL Trust	DS LPPL Confidence	Bubble all	Value score	Growth score	Financial strength Score
Hormel Foods Corp	USA	Consumer Staples	Food, Beverage & Tobacco	49.1%	34.8%	22.1%	28%	8%	44%	19%
