

EUROPEAN PHYSICAL SOCIETY
Secretary General

Professor Ursula Keller
ETH Honggerberg (Hpt E 16.2)
Institute of Quantum Electronics
CH- 8093 Zurich
Switzerland

Wednesday 4 April 2012

Dear Professor Keller,

Re: EPS FELLOWSHIP 2012

On behalf of the European Physical Society, I have the pleasure to announce that you have been elected to the EPS Fellowship for your pioneering contributions in the field of ultrafast science, and for key developments in femtosecond lasers that have revolutionized the study of ultrafast phenomena in physics, chemistry and biology, in particular for your invention of the semiconductor saturable absorber mirror, which transformed femtosecond lasers from complex devices that can only be used by specialists to reliable and robust instruments suitable for use in any general purpose scientific laboratory.

You may from now on and until termination of your Individual Membership in the Society, use the designation of 'EPS Fellow' on your business cards, letterhead, etc, and add it to your title. The Certificate will be sent shortly.

Congratulations on behalf of the EPS Executive Committee and Council!

With best regards,

David Lee
Secretary General EPS
