Mechanobiology Seminar Series

every 2nd Tuesday per month | 17.30-19.00

2022: 11 Oct¹, 8 Nov¹ & 13 Dec¹

2023: 10 Jan¹, 14 Feb¹, 14 Mar², 9 May² & 13 June²

¹ETH Zentrum, LEE E 101

²ETH Hönggerberg, HCI J 498

Bringing together the Mechanobiology research community

Mechanobiology is a wide field of research that covers any topic related to the physical and mechanical understanding of living systems and their applications, bringing together biologists, physicists, engineers and material scientists. For this community, spread across multiple groups and departments at ETH Zurich, we offer a novel platform to meet fellow mechanobiology enthusiasts during an informal seminar series where early career scientists will present their work.

Interactive, student-led format

Each session will consist of two presentations by early career scientists on their research project (30 min per talk, including Q&A). One date will be reserved for an invited speaker. Each session is concluded with networking opportunities.

Active participation desired

Whether you are a doctoral student, master student, recent graduate, or postdoc, please register for the seminar series and make the discussions lively and enriching. Participants from all departments are welcome. To apply for one of the presentation slots, please provide a title and keywords during your registration.
