

From Technologist to Senior Project Manager

Today, Michel Barge sets targets and evaluates the financial aspects of projects with greater finesse than before he completed the MAS MTEC programme. In it, he developed a new understanding of economics and management and was able to hone his analytical skills and unlock new perspectives on human behaviour and team dynamics.

Deciding to pursue the MAS MTEC degree was a great move for me. One of my professional goals was to move from an engineering into a management position. The MAS MTEC programme was also very beneficial for my personal development. I really enjoyed life as a student and was happy to be at ETH Zurich. I expanded my knowledge base and broadened my career perspectives. In addition, I developed some valuable personal contacts. An unforgettable highlight remains the study trip abroad.

The crucial factor in my choosing the MAS MTEC programme was the positive feedback I heard about it from alumni. Today,

I would tell anyone who is thinking about pursuing this degree the following: Go ahead and do it! This degree course offers everyone the chance to gain sound management skills and dive into current or newly emerging areas of research and knowledge. The study catalogue is fantastic and offers a huge selection – you're literally spoiled for choice. My tip: stay focused and be aware that the coursework in this programme is very interesting but involves some hard work. The MAS MTEC programme will broaden your horizons, sharpen your mind and bring you up to speed with the current world of management.

Michel Barge
Director, Senior Project Management at Heptagon
