

Independent advice to government on building a low-carbon economy and preparing for climate change

Tuesday, 26 September 2017

UK Climate Change Risk Assessment: international impacts

Daniel Johns Head of Adaptation

Session overview

- The UK Climate Change Act, and role of the Adaptation Sub-Committee
- Latest UK Climate Change Risk Assessment
 - Method
 - Key messages
 - International impacts
- Conclusions

The Climate Change Act and the CCC

Climate Change Act 2008

A statutory **2050 target** for emissions reduction (at least -80% vs 1990 levels)

Legally-binding 5-year 'carbon budgets'

Requirement to develop **policies** and **proposals** to meet budgets

Establishes the **CCC** as independent advisor

Committee on Climate Change

How fast? Level of 2050 target and carbon budgets

How? Sectoral contributions, technologies and policy options

Monitoring. Are we on track to meet budgets? Annual progress report to Parliament

+ Adaptation Sub-Committee

The Adaptation Sub-Committee of the Committee on Climate Change

Statutory roles under the Climate Change Act:

- To provide independent advice on climate risks and opportunities
- To report to Parliament on progress in preparing for climate <u>change</u>

Baroness Brown of Cambridge (chair)

Professor Jim Hall

Anne Johnson

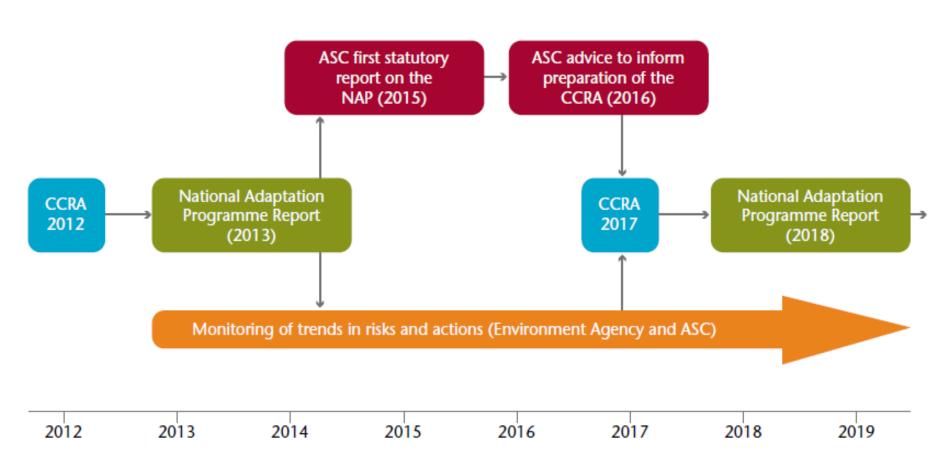

Sir Graham Wynne

The UK was the first to establish a legal framework for adaptation

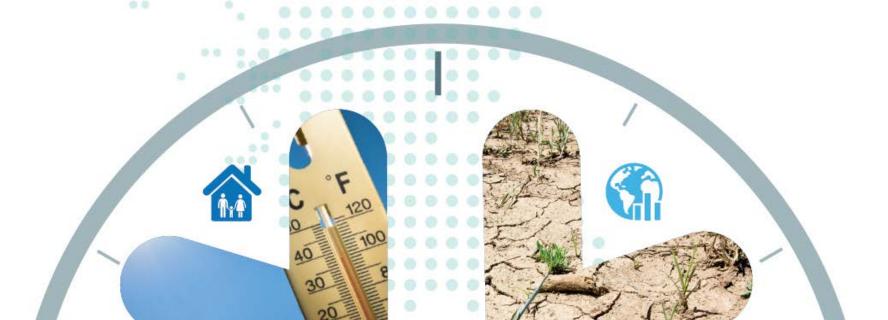

UK Climate Change Risk Assessment 2017

Synthesis report: priorities for the next five years

Aim of UK Climate Change Risk Assessment 2017

"Based on an assessment of:

- climate risks and opportunities
- and current adaptation actions
 what are the most urgent priorities for the next UK National Adaptation
 Programme?"

Source: ASC (2015) UK CCRA 2017 - Method

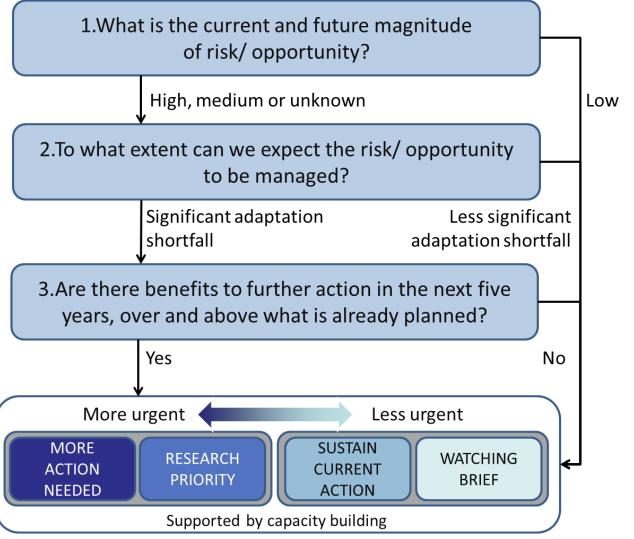

The most comprehensive assessment of UK risks and opportunities to date

Direct effects	Indirect effects	Major effects & discontinuities
Loss of small island states	Impact on global economy	Large scale global tipping points
Disruption to trade routes and supply chains	Volatility of food and feedstock prices in the UK	Major shifts in global patterns of food production
Flood risks, water scarcity, etc	Cross- sectoral, wider economic	High++ scenarios, major sea level rise Focus of CCRA2
	Loss of small island states Disruption to trade routes and supply chains Flood risks, water	Loss of small island states Disruption to trade routes and supply chains Flood risks, water scarcity, etc Impact on global economy Volatility of food and feedstock prices in the UK Cross- sectoral, wider economic

Source: ASC (2016) UK CCRA 2017 – Chapter 2: Approach and context

Identifying the most urgent risks/opportunities

Source: ASC (2016) UK CCRA 2017 – Chapter 2: Approach and context

Six priority areas for the next UK National Adaptation Programme

Flooding and coastal change risks to communities, businesses and infrastructure (Ch3, Ch4 Ch5, Ch6) Risks to health, wellbeing and productivity from high temperatures (Ch5, Ch6) MORE Risk of shortages in the public water supply, and for agriculture, **ACTION** energy generation and industry (Ch3, Ch4, Ch5, Ch6) **NEEDED** Risks to natural capital, including terrestrial, coastal, marine and freshwater ecosystems, soils and biodiversity (Ch3) Risks to domestic and international food production and trade (Ch3, Ch6, Ch7) **RESEARCH** New and emerging pests and diseases, and invasive non-native species, affecting people, plants and animals (Ch3, Ch5, Ch7) **PRIORITY NOW →** FUTURE

RISK MAGNITUDE: LOW MEDIUM HIGH

"Once in a lifetime" floods in England since 2000

International climate impacts indirectly affect the UK

Source: ASC (2016) UK CCRA 2017: Chapter 7 – International dimensions

International dimensions of risk discussed in UK CCRA

Impacts on the UK

Food export/import mix: UK land-use change

Food price volatility

Health impacts, nutrition and food safety (vulnerable groups)

Changing demand for labour in food system and inward migration

Demand for interventions, geopolitical instability and conflict

Demand for humanitarian assistance in globally affected regions

Long-term investments, impacts on insurance

Short-term shocks

Disruption to supply chains (lt1)

Disruption to agricultural production (lt1)

Displacement of vulnerable populations from weather extremes (lt4)

Violent conflict over resource scarcity (It5)

Long-term impacts

Global food production (lt3)

Global water availability

Food safety (It2)

Increased animal and plant disease

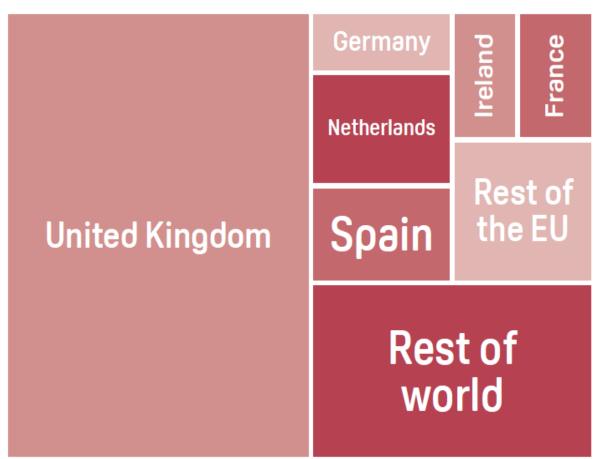

Unstable governance and geopolitical instability (It6)

Economic attractiveness and viability of areas and settlements causing migration (lt4)

Increased risk of human disease

Sourcing food from around the world is a strength but also a weakness

- About half of the farm-gate value of unprocessed food in the UK is imported
- This is a positive aspect of the UK food system as diversification of sources increases resilience
- Climate change can impact both domestic and international food production and trade
- Consuming food from a single source would make the system more vulnerable

Source: Food Standards Agency (2016) Food crime, annual strategic assessment

Risks to the global food system

Impacts on the UK

Food export/import mix: UK land-use change

Food price volatility

Health impacts, nutrition and food safety (vulnerable groups)

Changing demand for labour in food system and inward migration

Demand for interventions, geopolitical instability and conflict

Demand for humanitarian assistance in globally affected regions

Long-term investments, impacts on insurance

Short-term shocks

Disruption to supply chains (lt1)

Disruption to agricultural production (lt1)

Displacement of vulnerable populations from weather extremes (lt4)

Violent conflict over resource scarcity (It5)

Long-term impacts

Global food production (lt3)

Global water availability

Food safety (It2)

Increased animal and plant disease

Unstable governance and geopolitical instability (It6)

viability of areas and settlements causing migration (lt4)

Increased risk of human disease

Potential for indirect impacts on food prices too

Impacts on the UK

Food export/import mix: UK land-use change

Food price volatility

Health impacts, nutrition and food safety (vulnerable groups)

Changing demand for labour in food system and inward migration

Demand for interventions, geopolitical instability and conflict

Demand for humanitarian assistance in globally affected regions

Long-term investments, impacts on insurance

Short-term shocks

Disruption to supply chains (lt1)

Disruption to agricultural production (lt1)

Displacement of vulnerable populations from weather extremes (It4)

Violent conflict over resource scarcity (It5)

Long-term impacts

Global food production (lt3)

Global water availability

Food safety (It2)

Increased animal and plant disease

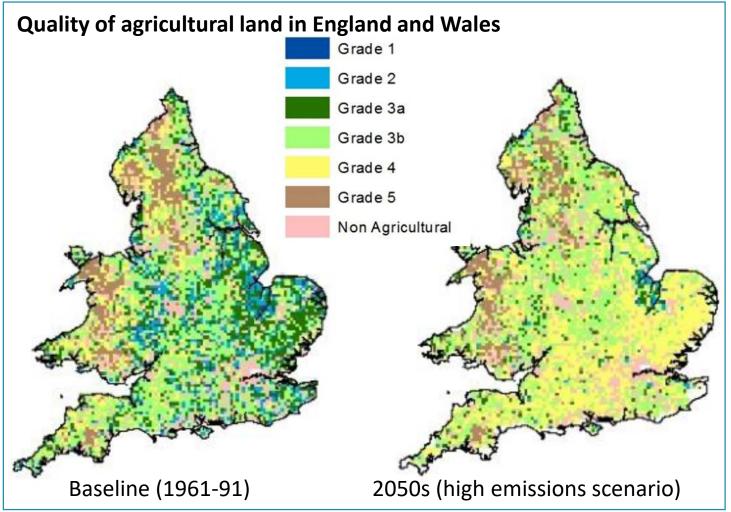

Unstable governance and geopolitical instability (It6)

Economic attractiveness and viability of areas and settlements causing migration (It4)

Increased risk of human disease

Domestically, food production depends on the condition of soils...

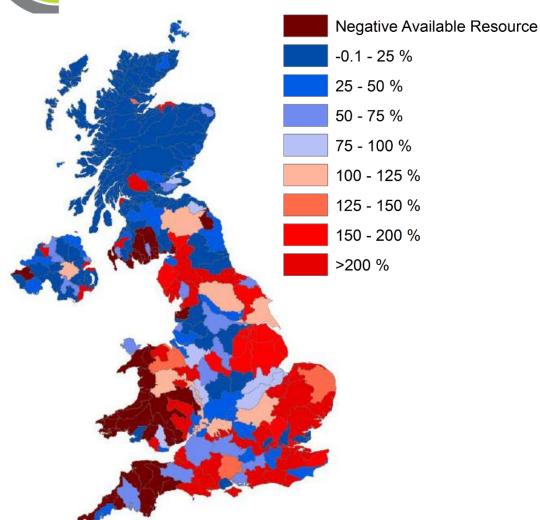

- 'Best and Most Versatile' land in England now and in 2050s
- Projected to decrease from 38% to 9% by 2050s
- This is due to projected increases in soil aridity

Source: from Defra (2015), see UK CCRA 2017 Evidence Report: Chapter 3 - Natural environment

...and the availability of water

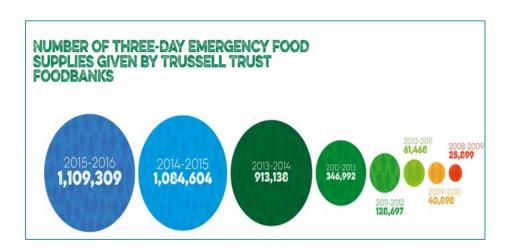

- Map showing water availability in the 2080s under a 3.5°C, low population growth and high adaptation scenario
- Great Britain overall projected to be in deficit by 800 to 3,000 MI/d by the 2050s

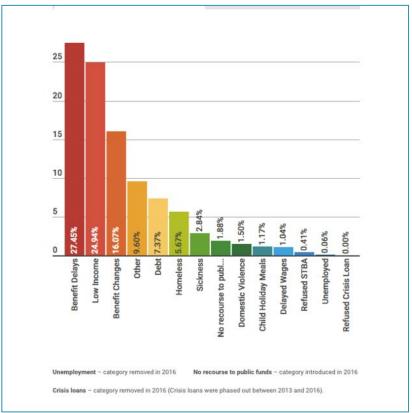

Source: HR Wallingford (2015) for the ASC- Updated projections of water availability in the UK

Higher food prices affect access by vulnerable groups to nutritious food

 Reliance on food aid has steadily increased over the past decade, although reasons for this are still under debate and might not be related to access to food (To note: most of the food provided by food banks is processed food)

Source: Trussell Trust (2013) Walking the Breadline: The scandal of food poverty in 21st-century Britain

More action is needed to improve the resilience of the UK food system

Current government actions focus on monitoring and responding to price shocks

- UK government monitors current risks in the "here and now", rather than looking at possible changes in the near future
- No plans for further actions to reduce the risk

A national, strategic approach is needed to identify appropriate actions

- Support sustainable and climate resilient agriculture in the UK and abroad
- Build strategic trading partnerships
- Improve the resilience of supply chains

Action can also be taken at the local level

- Raise awareness on demand-side measures that reduce waste and greenhouse gas emissions
- Ensure access to healthy and nutritious food for the most vulnerable
- Improve resilience of infrastructure and business

Updated adaptation programmes:

UK (England): summer 2018

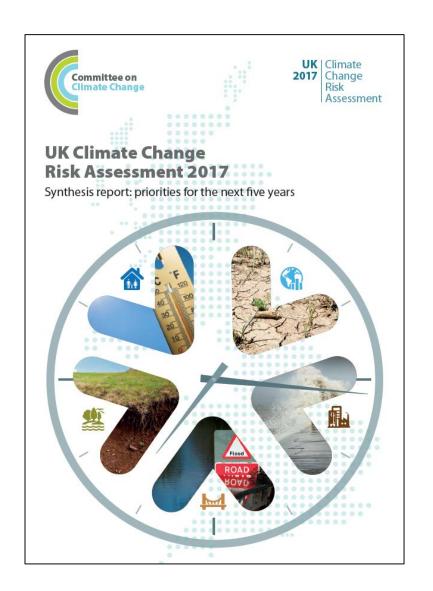

Scotland, Northern Ireland: 2019

Wales: as part of Wellbeing Act

Next ASC statutory progress reports:

UK (England): June 2019

Next steps
